## Declaration of Conformity

---

We, Thomson Broadcast Solutions Nederland B.V., Kapittelweg 10, 4827 HG Breda, The Netherlands declare under our sole responsibility that this product is in compliance with the following standards:

- EN60065 : Safety
- EN55103-1 : EMC (Emission)
- EN55103-2 : EMC (Immunity)

following the provisions of:

- a. the Safety Directives 73/23/EEC and 93/68/EEC
- b. the EMC Directives 89/336/EEC and 93/68/EEC

## FCC Class A Statement

---

This product generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause interference to radio communications.

It has been tested and found to comply with the limits for a class A computing device pursuant to Subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment.

Operation of this product in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

## About This Manual

---

### Purpose of this manual

#### Service policy

The LDK6985/01 is a sophisticated Script Board containing state-of-the-art electronic components which are designed to provide long-life operation without the need for maintenance. With this in mind, the service policy of Thomson Multimedia Broadcast Solutions endeavours to ensure that help will be quickly on hand in the unlikely event of anything going wrong. The guiding principles of the Thomson Multimedia Broadcast Solutions first line maintenance philosophy are speed and cost effectiveness. First line maintenance is dedicated to keeping your viewfinder operational, despite a fault, by replacement boards and the replacement of minor mechanical parts by the user.

#### Packing/Unpacking

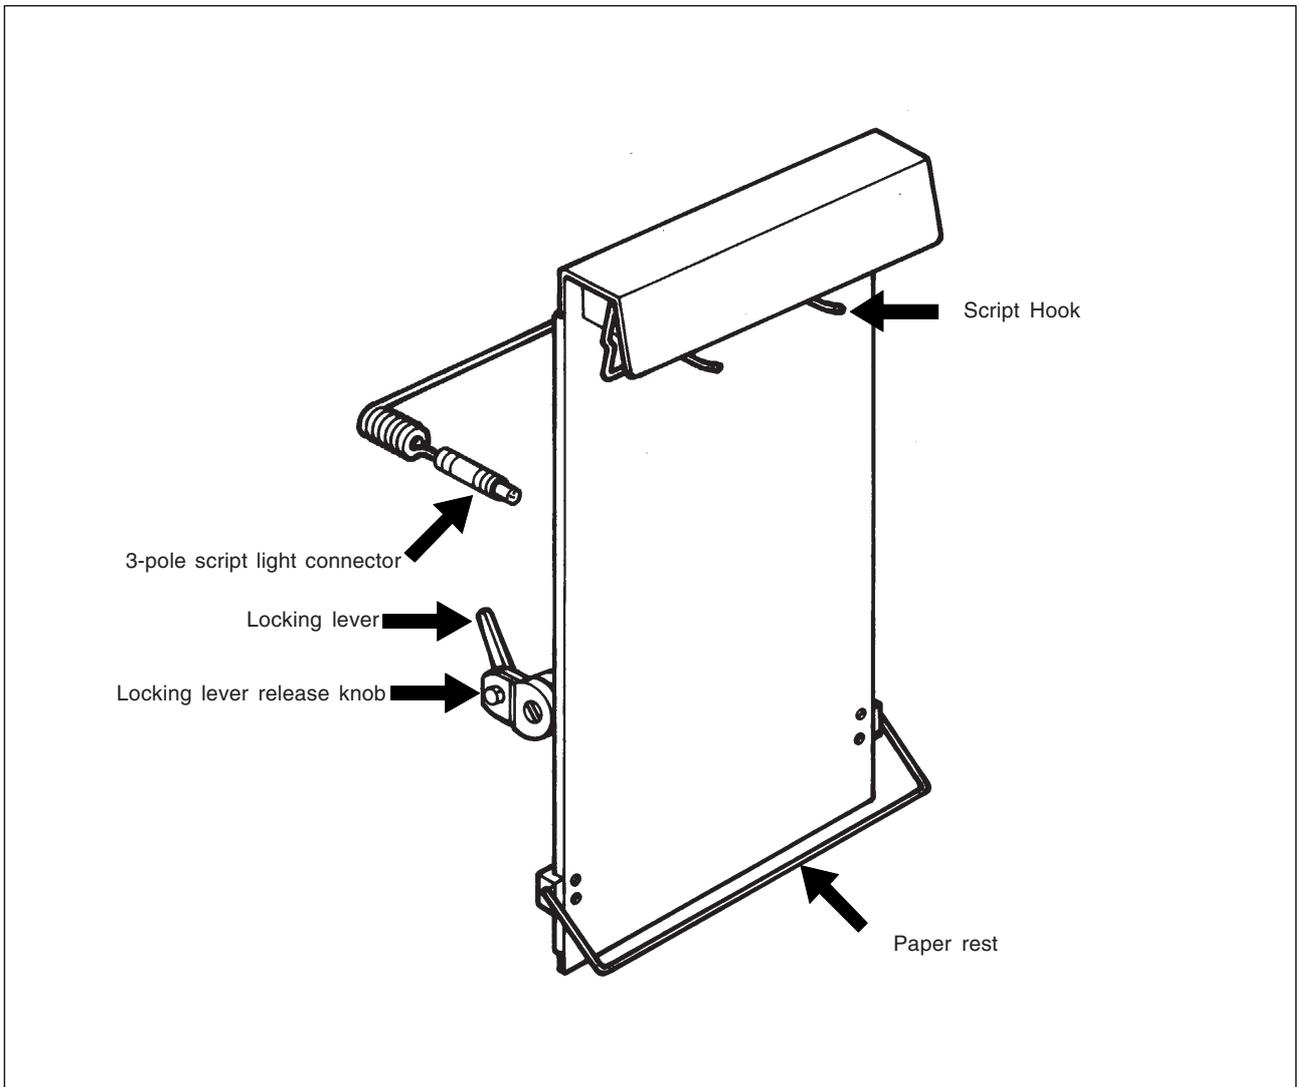

Inspect the shipping container for evidence of damage immediately after receipt. If the shipping container or cushioning material is damaged, it should be kept until the contents of the shipment have been checked for completeness and the units have been checked mechanically and electrically.

The contents of the shipment should be checked against the packing list. If the contents are incomplete, if there is mechanical damage or defect, or if the units do not perform correctly when unpacked, notify your Thomson Multimedia Broadcast Solutions sales or service centre within eight days. If the shipping container shows signs of damage or stress, notify the carrier as well.

If a unit is being returned to Thomson Multimedia Broadcast Solutions for servicing, try to use the containers and materials of the original packaging. Attach a tag indicating the type of service required, return address, model number, full serial number and the return number which will be supplied by your Thomson Multimedia Broadcast Solutions service centre.

If the original packing can no longer be used, the following general instructions should be used for repacking with commercially available materials:

- a. Wrap unit in heavy paper or plastic.
- b. Use strong shipping container.
- c. Use a layer of shock-absorbing material around all sides of the unit to provide firm cushioning and prevent movement inside container.
- d. Seal shipping container securely.
- e. Mark shipping container FRAGILE to ensure careful handling.

### Mounting the Script Board

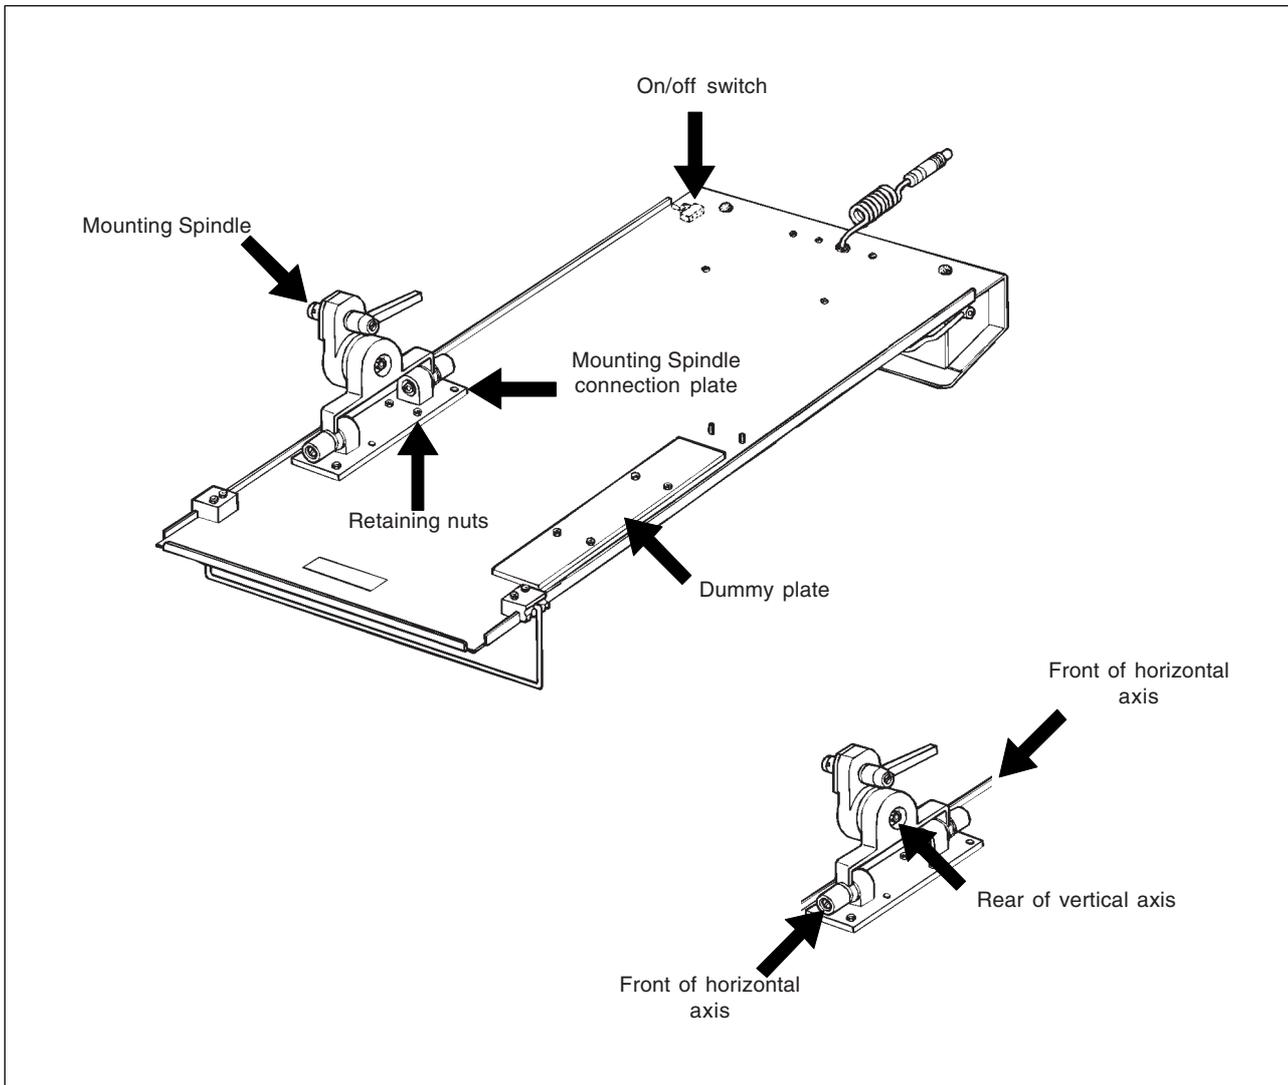

1. Turn locking lever counterclockwise to reduce the circumference of the mounting spindle.
2. Insert spindle into the holder on the camera.
3. Turn the locking lever clockwise to tighten the spindle in the holder. If necessary remove the locking lever and press the lever release knob and then tighten some more with the knurled screw and replace locking lever.
4. Connect the 3-pole connector to the script light socket on the camera.

### On/off Switch

The on/off switch is a 3-position switch with an OFF position, a normal ON position, and a dimmed ON position. Choose the position best suited to your circumstances.

### Positioning the Script

1. Hang the script from the two hooks provided.
2. Place the script on top of the paper rest. The paper rest can be moved back and forward under the script so that an even illumination of the paper is obtained.

### Alternative Script Board Positions

The height of the script board can be changed by repositioning the mounting spindle connection plate on the rear of the script board. Several bolts are available for this purpose. Just unscsew the nuts retaining the mounting spindle connection plate, place the plate on the alternative bolts, and secure it with the nuts.

The mounting spindle connection plate can also be moved to the opposite side of the script board. Remove the dummy plate and mount the mounting spindle connection plate onto the freed bolts. Again you can choose the set of bolts that gives you the height you require. Store the dummy plate on the bolts vacated by the mounting spindle connection plate.

### Adjusting the Friction

The force needed to tilt the script board can be changed by adjusting the friction of the rotation axes. The script board can tilt in two directions - vertically and horizontally.

Two rotation axes must be adjusted to change the horizontal friction. One rotation axis must be adjusted to change the vertical friction. The method is the same for all three rotation axes:

- a. Loosen the locking nut at the rear of the axis.
- b. Adjust the screw at the front of the axis to obtain the desired friction.
- c. Tighten the locking nut at the rear of the axis.
