## **Terms and Conditions**

Please read the following terms and conditions carefully. By using MV-800 documentation, you agree to the following terms and conditions.

Grass Valley hereby grants permission and license to owners of MV-800s to use their product manuals for their own internal business use. Manuals for Grass Valley products may not be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, for any purpose unless specifically authorized in writing by Grass Valley.

A Grass Valley manual may have been revised to reflect changes made to the product during its manufacturing life. Thus, different versions of a manual may exist for any given product. Care should be taken to ensure that one obtains the proper manual version for a specific product serial number.

Information in this document is subject to change without notice and does not represent a commitment on the part of Grass Valley.

Warranty information is available from the Legal Terms and Conditions section of Grass Valley's website (www.grassvalley.com).

Title MV-800 User Manual

Part Number RMY3 MV-800-UM Issue 2 Revision 1

Revision 2019 March 14, 10:51

### **About this Manual**

Thank you for purchasing your new MV-800 Integrated Multiviewer.

This MV-800 user manual describes how to install, configure and operate the MV-800 multiviewer in the Sirius 830, 840 and 850 routers.

Refer to the appropriate Sirius 800 Router Installation Manuals for details on how to unpack, install and test a Sirius 800 router. Refer to the Sirius 800 Router User Manual for router details. Some of the safety warnings and cautions given the Sirius 800 manuals are repeated in this MV-800 user manual and are provided herein for information.

If you have any questions regarding the installation and setup of your product, please contact Grass Valley Customer Support.

#### **Related Documents**

The following Grass Valley manuals are related documents:

Related Document	Description
User Manual: MV-8 Series Multiviewer	User manual for the multiviewer 'engine' within MV-8X0 Multiviewer products.
User Manual: Orbit - Introduction	A general introduction to Grass Valley Orbit and its applications.
User Manual: Orbit for Multiviewers	Describes multiviewer-specific details of Orbit.
User Manual: Sirius 800 Router	User manual for Sirius 800 series routers.
Installation Sirius 830, Sirius 840, Manuals: Sirius 850	Installation manuals for Sirius 800 series routers.

## **Important Safety Information**

This section provides important safety guidelines for operators and service personnel. Specific warnings and cautions appear throughout the manual where they apply. Please read and follow this important information, especially those instructions related to the risk of electric shock or injury to persons.

## **Symbols and Their Meanings**

Indicates that dangerous high voltage is present within the equipment enclosure that may be of sufficient magnitude to constitute a risk of electric shock.

Indicates that the user, operator or service technician should refer to the product manuals for important operating, maintenance, or service instructions.

This is a prompt to note the fuse rating when replacing fuses. The fuse referenced in the text must be replaced with one having the ratings indicated.

Identifies a protective grounding terminal which must be connected to earth ground prior to making any other equipment connections.

Identifies an external protective grounding terminal which may be connected to earth ground as a supplement to an internal grounding terminal.

Indicates that static sensitive components are present, which may be damaged by electrostatic discharge. Use anti-static procedures, equipment and surfaces during servicing.

Indicates that the equipment has more than one power supply cord, and that all power supply cords must be disconnected before servicing to avoid electric shock.

The presence of this symbol in or on Grass Valley equipment means that it has been tested and certified as complying with applicable Underwriters Laboratory (UL) regulations and recommendations for USA.

The presence of this symbol in or on Grass Valley equipment means that it has been tested and certified as complying with applicable Canadian Standard Association (CSA) regulations and recommendations for USA/Canada.

The presence of this symbol in or on Grass Valley equipment means that it has been tested and certified as complying with applicable Underwriters Laboratory (UL) regulations and recommendations for USA/Canada.

The presence of this symbol in or on Grass Valley equipment means that it has been tested and certified as complying with applicable Intertek Testing Services regulations and recommendations for USA/Canada.

The presence of this symbol in or on Grass Valley product means that it complies with all applicable European Union (CE) directives.

The presence of this symbol in or on Grass Valley product means that it complies with safety of laser product applicable standards.

## Warnings

A warning indicates a possible hazard to personnel, which may cause injury or death. Observe the following general warnings when using or working on this equipment:

•Appropriately listed/certified mains supply power cords must be used for the connection of the equipment to the rated mains voltage.

- This product relies on the building's installation for short-circuit (over-current) protection. Ensure that a fuse or circuit breaker for the rated mains voltage is used on the phase conductors.
- Any instructions in this manual that require opening the equipment cover or enclosure are for use by qualified service personnel only.
- Do not operate the equipment in wet or damp conditions.
- This equipment is grounded through the grounding conductor of the power cords. To avoid electrical shock, plug the power cords into a properly wired receptacle before connecting the equipment inputs or outputs.
- Route power cords and other cables so they are not likely to be damaged. Properly support heavy cable bundles to avoid connector damage.
- Disconnect power before cleaning the equipment. Do not use liquid or aerosol cleaners; use only a damp cloth.
- Dangerous voltages may exist at several points in this equipment. To avoid injury, do not touch exposed connections and components while power is on.
- High leakage current may be present. Earth connection of product is essential before connecting power.
- Prior to servicing, remove jewelry such as rings, watches, and other metallic objects.
- To avoid fire hazard, use only the fuse type and rating specified in the service instructions for this product, or on the equipment.
- To avoid explosion, do not operate this equipment in an explosive atmosphere.
- Use proper lift points. Do not use door latches to lift or move equipment.
- Avoid mechanical hazards. Allow all rotating devices to come to a stop before servicing.
- Have qualified service personnel perform safety checks after any service.

#### **Cautions**

A caution indicates a possible hazard to equipment that could result in equipment damage. Observe the following cautions when operating or working on this equipment:

- This equipment is meant to be installed in a restricted access location.
- When installing this equipment, do not attach the power cord to building surfaces.
- Products that have no on/off switch, and use an external power supply must be installed in proximity to a main power outlet that is easily accessible.
- Use the correct voltage setting. If this product lacks auto-ranging power supplies, before applying power ensure that each power supply is set to match the power source.
- Provide proper ventilation. To prevent product overheating, provide equipment ventilation in accordance with the installation instructions.

- Do not operate with suspected equipment failure. If you suspect product damage or equipment failure, have the equipment inspected by qualified service personnel.
- To reduce the risk of electric shock, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so. Refer all servicing to qualified service personnel.
- This unit may have more than one power supply cord. Disconnect all power supply cords before servicing to avoid electric shock.
- Follow static precautions at all times when handling this equipment. Servicing should be done in a static-free environment.
- To reduce the risk of electric shock, plug each power supply cord into separate branch circuits employing separate service grounds.

## **Electrostatic Discharge (ESD) Protection**

Electrostatic discharge occurs when electronic components are improperly handled and can result in intermittent failure or complete damage adversely affecting an electrical circuit. When you remove and replace any card from a frame always follow

ESD-prevention procedures:

- Ensure that the frame is electrically connected to earth ground through the power cord or any other means if available.
- Wear an ESD wrist strap ensuring that it makes good skin contact. Connect the grounding clip to an *unpainted surface* of the chassis frame to safely ground unwanted ESD voltages. If no wrist strap is available, ground yourself by touching the *unpainted* metal part of the chassis.
- For safety, periodically check the resistance value of the antistatic strap, which should be between 1 and 10 megohms.
- When temporarily storing a card make sure it is placed in an ESD bag.
- Cards in an earth grounded metal frame or casing do not require any special ESD protection.

# **Battery Handling**

This product may include a backup battery. There is a danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions. Before disposing of your Grass Valley equipment, please review the Disposal and Recycling Information at:

http://www.grassvalley.com/assets/media/5692/Take-Back\_Instructions.pdf

# **Cautions for LCD and TFT Displays**

Excessive usage may harm your vision. Rest for 10 minutes for every 30 minutes of usage.

If the LCD or TFT glass is broken, handle glass fragments with care when disposing of them. If any fluid leaks out of a damaged glass cell, be careful not to get the liquid crystal fluid in your mouth or skin. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water. Never swallow the fluid. The toxicity is extremely low but caution should be exercised at all times.

## Mesures de sécurité et avis importants

La présente section fournit des consignes de sécurité importantes pour les opérateurs et le personnel de service. Des avertissements ou mises en garde spécifiques figurent dans le manuel, dans les sections où ils s'appliquent. Prenez le temps de bien lire les consignes et assurez-vous de les respecter, en particulier celles qui sont destinées à prévenir les décharges électriques ou les blessures.

## Signification des symboles utilisés

Signale la présence d'une tension élevée et dangereuse dans le boîtier de l'équipement; cette tension peut être suffisante pour constituer un risque de décharge électrique.

Avertit l'utilisateur, l'opérateur ou le technicien de maintenance que des instructions importantes relatives à l'utilisation et à l'entretien se trouvent dans la documentation accompagnant l'équipement.

Invite l'utilisateur, l'opérateur ou le technicien de maintenance à prendre note du calibre du fusible lors du remplacement de ce dernier. Le fusible auquel il est fait référence dans le texte doit être remplacé par un fusible du même calibre.

Identifie une borne de mise à la terre de protection. Il faut relier cette borne à la terre avant d'effectuer toute autre connexion à l'équipement.

Identifie une borne de mise à la terre externe qui peut être connectée en tant que borne de mise à la terre supplémentaire.

Signale la présence de composants sensibles à l'électricité statique et qui sont susceptibles d'être endommagés par une décharge électrostatique. Utilisez des procédures, des équipements et des surfaces antistatiques durant les interventions d'entretien.

Le symbole ci-contre signifie que l'appareil comporte plus d'un cordon d'alimentation et qu'il faut débrancher tous les cordons d'alimentation avant toute opération d'entretien, afin de prévenir les chocs électriques.

La marque UL certifie que l'appareil visé a été testé par Underwriters Laboratory (UL) et reconnu conforme aux exigences applicables en matière de sécurité LISTED électrique en vigueur au Canada et aux États-Unis.

La marque C-CSA-US certifie que l'appareil visé a été testé par l'Association canadienne de normalisation (CSA) et reconnu conforme aux exigences applicables en matière de sécurité électrique en vigueur au Canada et aux États-Unis.

La marque C-UL-US certifie que l'appareil visé a été testé par Underwriters Laboratory (UL) et reconnu conforme aux exigences applicables en matière de sécurité électrique en vigueur au Canada et aux États-Unis.

La marque ETL Listed d'Intertek pour le marché Nord-Américain certifie que l'appareil visé a été testé par Intertek et reconnu conforme aux exigences applicables en matière de sécurité électrique en vigueur au Canada et aux États-Unis.

Le marquage CE indique que l'appareil visé est conforme aux exigences essentielles des directives applicables de l'Union européenne en matière de sécurité électrique, de compatibilité électromagnétique et de conformité environnementale.

Le symbole ci-contre sur un appareil Grass Valley ou à l'intérieur de l'appareil indique qu'il est conforme aux normes applicables en matière de sécurité laser.

#### **Avertissements**

Les avertissements signalent des conditions ou des pratiques susceptibles d'occasionner des blessures graves, voire fatales. Veuillez vous familiariser avec les avertissements d'ordre général ci-dessous :

- Un cordon d'alimentation dûment homologué doit être utilisé pour connecter l'appareil à une tension de secteur de 120 V CA ou 240 V CA.
- La protection de ce produit contre les courts-circuits (surintensités) dépend de l'installation électrique du bâtiment. Assurez-vous qu'un fusible ou un disjoncteur pour 120 V CA ou 240 V CA est utilisé sur les conducteurs de phase.
- Dans le présent manuel, toutes les instructions qui nécessitent d'ouvrir le couvercle de l'équipement sont destinées exclusivement au personnel technique qualifié.
- N'utilisez pas cet appareil dans un environnement humide.
- Cet équipement est mis à la terre par le conducteur de mise à la terre des cordons d'alimentation. Pour éviter les chocs électriques, branchez les cordons d'alimentation sur une prise correctement câblée avant de brancher les entrées et sorties de l'équipement.
- Acheminez les cordons d'alimentation et autres câbles de façon à ce qu'ils ne risquent pas d'être endommagés. Supportez correctement les enroulements de câbles afin de ne pas endommager les connecteurs.
- Coupez l'alimentation avant de nettoyer l'équipement. Ne pas utiliser de nettoyants liquides ou en aérosol. Utilisez uniquement un chiffon humide.
- Des tensions dangereuses peuvent exister en plusieurs points dans cet équipement. Pour éviter toute blessure, ne touchez pas aux connexions ou aux composants exposés lorsque l'appareil est sous tension.
- Avant de procéder à toute opération d'entretien ou de dépannage, enlevez tous vos bijoux (notamment vos bagues, votre montre et autres objets métalliques).
- Pour éviter tout risque d'incendie, utilisez uniquement les fusibles du type et du calibre indiqués sur l'équipement ou dans la documentation qui l'accompagne.
- Ne pas utiliser cet appareil dans une atmosphère explosive.
- Présence possible de courants de fuite. Un raccordement à la masse est indispensable avant la mise sous tension.
- Après tout travail d'entretien ou de réparation, faites effectuer des contrôles de sécurité par le personnel technique qualifié.

## Mises en garde

Les mises en garde signalent des conditions ou des pratiques susceptibles d'endommager l'équipement. Veuillez vous familiariser avec les mises en garde cidessous :

- L'appareil est conçu pour être installé dans un endroit à accès restreint.
- Au moment d'installer l'équipement, ne fixez pas les cordons d'alimentation aux surfaces intérieures de l'édifice.

- Les produits qui n'ont pas d'interrupteur marche-arrêt et qui disposent d'une source d'alimentation externe doivent être installés à proximité d'une prise de courant facile d'accès.
- Si l'équipement n'est pas pourvu d'un modules d'alimentation auto-adaptables, vérifiez la configuration de chacun des modules d'alimentation avant de les mettre sous tension.
- Assurez une ventilation adéquate. Pour éviter toute surchauffe du produit, assurez une ventilation de l'équipement conformément aux instructions d'installation.
- N'utilisez pas l'équipement si vous suspectez un dysfonctionnement du produit. Faites-le inspecter par un technicien qualifié.
- Pour réduire le risque de choc électrique, n'effectuez pas de réparations autres que celles qui sont décrites dans le présent manuel, sauf si vous êtes qualifié pour le faire. Confiez les réparations à un technicien qualifié. La maintenance doit se réaliser dans un milieu libre d'électricité statique.
- L'appareil peut comporter plus d'un cordon d'alimentation. Afin de prévenir les chocs électriques, débrancher tous les cordons d'alimentation avant toute opération d'entretien.
- Veillez à toujours prendre les mesures de protection antistatique appropriées quand vous manipulez l'équipement.
- Pour réduire le risque de choc électrique, branchez chaque cordon d'alimentation dans des circuits de dérivation distincts utilisant des zones de service distinctes.

# Protection contre les décharges électrostatiques (DES)

Une décharge électrostatique peut se produire lorsque des composants électroniques ne sont pas manipulés de manière adéquate, ce qui peut entraîner des défaillances intermittentes ou endommager irrémédiablement un circuit électrique. Au moment de remplacer une carte dans un châssis, prenez toujours les mesures de protection antistatique appropriées :

- Assurez-vous que le châssis est relié électriquement à la terre par le cordon d'alimentation ou tout autre moyen disponible.
- Portez un bracelet antistatique et assurez-vous qu'il est bien en contact avec la peau.
   Connectez la pince de masse à une surface non peinte du châssis pour détourner à la terre toute tension électrostatique indésirable. En l'absence de bracelet antistatique, déchargez l'électricité statique de votre corps en touchant une surface métallique non peinte du châssis.
- Pour plus de sécurité, vérifiez périodiquement la valeur de résistance du bracelet antistatique. Elle doit se situer entre 1 et 10 mégohms.
- Si vous devez mettre une carte de côté, assurez-vous de la ranger dans un sac protecteur antistatique.
- Les cartes qui sont reliées à un châssis ou boîtier métallique mis à la terre ne nécessitent pas de protection antistatique spéciale.

# Manipulation de la pile

Ce produit peut inclure une pile de sauvegarde. Il y a un risque d'explosion si la pile est remplacée de manière incorrecte. Remplacez la pile uniquement par un modèle identique ou équivalent recommandé par le fabricant. Disposez des piles usagées conformément aux instructions du fabricant. Avant de vous séparer de votre équipement Grass Valley, veuillez consulter les informations de mise au rebut et de recyclage à:

http://www.grassvalley.com/assets/media/5692/Take-Back\_Instructions.pdf

## Précautions pour les écrans LCD et TFT

Regarder l'écran pendant une trop longue période de temps peut nuire à votre vision. Prenez une pause de 10 minutes, après 30 minutes d'utilisation.

Si l'écran LCD ou TFT est brisé, manipulez les fragments de verre avec précaution au moment de vous en débarrasser. veillez à ce que le cristal liquide n'entre pas en contact avec la peau ou la bouche. En cas de contact avec la peau ou les vêtements, laver immédiatement à l'eau savonneuse. Ne jamais ingérer le liquide. La toxicité est extrêmement faible, mais la prudence demeure de mise en tout temps.

### **Environmental Information**

European (CE) WEEE directive.

This symbol on the product(s) means that at the end of life disposal it should not be mixed with general waste.

Visit www.grassvalley.com for recycling information.

Grass Valley believes this environmental information to be correct but cannot guarantee its completeness or accuracy since it is based on data received from sources outside our company. All specifications are subject to change without notice.

If you have questions about Grass Valley environmental and social involvement (WEEE, RoHS, REACH, etc.), please contact us at <a href="mailto:environment@grassvalley.com">environment@grassvalley.com</a>.

## **Warnings and Precautions**

The hardware modules covered by this user manual are not mains powered. The hardware modules must be fitted into a mains powered frame, host equipment, for operation.

## **Safety Warnings**

**CAUTION**: These servicing instructions are for use by qualified personnel only. To reduce the risk of electric shock, do not perform any servicing other than that contained in the Operating Instructions unless you are qualified to do so. Refer all servicing to qualified service personnel.

WARNING

To reduce the risk of electric shock, do not expose the host equipment to rain or moisture.

Always ensure that the host equipment is properly earthed and power connections correctly made.

The host equipment must be supplied from a power system providing a PROTECTIVE EARTH connection and having a neutral connection which can be reliably identified.

The power circuit breakers or switches supplying power to the host equipment should be close to the unit and easily accessible.

#### **Lithium Batteries**

#### **Battery Warning**

#### **CAUTION**

This equipment contains a lithium battery

There is a danger of explosion if this is replaced incorrectly

Replace only with the same or equivalent type.

Dispose of used batteries according to the manufacturer instructions.

Batteries **shall only** be replaced by trained service technicians.

Your Grass Valley equipment usually comes with at least one button battery located on the main printed circuit board. The batteries are used for backup and should not need to be replaced during the lifetime of the equipment.

#### **Battery Disposal**

Before disposing of your Grass Valley equipment, please remove the battery as follows:

- 1 Make sure the AC adapter / power Cord is unplugged from the power outlet.
- 2 Remove the protective cover from your equipment.

- 3 Gently remove the battery from its holder using a blunt instrument for leverage such as a screwdriver if necessary. In some cases the battery will need to be desoldered from the PCB.
- 4 Dispose of the battery and equipment according to your local environmental laws and guidelines.

#### WARNING

- Be careful not to short-circuit the battery by adhering to the appropriate safe handling practices.
- Do not dispose of batteries in a fire as they may explode.
- Batteries may explode if damaged or overheated.
- · Do not dismantle, open or shred batteries.
- In the event of a battery leak, do not allow battery liquid to come in contact with skin or eyes.
- Seek medical help immediately in case of ingestion, inhalation, skin or eye contact, or suspected exposure to the contents of an opened battery.

## **Laser Safety - Fiber Output SFP and QSFP Modules Warning**

# LASER SAFETY

The average optical output power does not exceed 0 dBm (1mW) under normal operating conditions. Unused optical outputs should be covered to prevent direct exposure to the laser beam.

Even though the power of these lasers is low, the beam should be treated with caution and common sense because it is intense and concentrated. Laser radiation can cause irreversible and permanent damage of eyesight. Please read the following guidelines carefully:

- Make sure that a fiber is connected to the board's fiber outputs before power is applied. If a fiber cable (e.g. patchcord) is already connected to an output, make sure that the cable's other end is connected, too, before powering up the board.
- **Do not** look in the end of a fiber to see if light is coming out. The laser wavelengths being used are totally invisible to the human eye and can cause permanent damage. Always use optical instrumentation, such as an optical power meter, to verify light output.

## **Cable Management**

It is important that the cabling to and from the multiviewer is correctly labeled and routed. This will simplify the work required if the installation needs to be changed or added to at a future date.

#### **CAUTION**

- Cables connected to the MV-800 Integrated Multiviewer must be fitted with adequate vertical and horizontal strain relief to avoid twisting of the rear panels causing damage to the MV-800 rear connectors and loss of electrical/signal connection to the multiviewer or monitor displays.
- Cables connected to the MV-800 Integrated Multiviewer should be routed so they do not cover any of the router frame fan exhausts because any obstruction can restrict cooling airflow through the router.

## **Sirius Router Power Requirements**

Before adding an MV-800 to a Sirius 800 router frame, check that the power supplies fitted to the router frame can supply sufficient power to the router and MV-800. See the Sirius 800 User Manual for router power requirements and contact Grass Valley Support for advice.

## **Safety and EMC Standards**

This equipment complies with the following standards:

#### Safety

**Information Technology Equipment - Safety Part 1** 

EN60950-1: 2006

Safety of Information Technology Equipment Including Electrical Business Equipment.

UL1419 (4<sup>th</sup> Edition)

Standard for Safety – Professional Video and Audio equipment (UL file number E193966)

#### **EMC Standards**

This unit conforms to the following standards:

EN55032:2015 (Class A)

Electromagnetic Compatibility of multimedia equipment - Emission requirements

EN61000-3-2:2014 (Class A)

Electromagnetic Compatibility - Limits for harmonic current emissions

EN61000-3-3:2013

Electromagnetic Compatibility - Limits of voltage changes, voltage fluctuations and flicker

EN55103-2:2009 (Environment E2)

Electromagnetic Compatibility, Product family standard for audio, video, audio-visual and entertainment lighting control apparatus for professional use. Part 2. Immunity

#### WARNING

This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.

FCC / CFR 47:Part 15 (Class A)

Federal Communications Commission Rules Part 15, Subpart B

Caution to the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

#### **EMC Performance of Cables and Connectors**

Grass Valley products are designed to meet or exceed the requirements of the appropriate European EMC standards. In order to achieve this performance in real installations it is essential to use cables and connectors with good EMC characteristics.

All signal connections (including remote control connections) shall be made with screened cables terminated in connectors having a metal shell. The cable screen shall have a large-area contact with the metal shell.

#### **SIGNAL/DATA PORTS**

For unconnected signal/data ports on the unit, fit shielding covers. For example, fit EMI blanking covers to SFP+ type ports; and fit 75  $\Omega$  RF terminators to BNC type ports

#### **COAXIAL CABLES**

Coaxial cables connections (particularly serial digital video connections) shall be made with high-quality double-screened coaxial cables such as Belden 8281 or BBC type PSF1/2M and Belden 1694A (for 3Gbps).

#### **D-TYPE CONNECTORS**

D-type connectors shall have metal shells making good RF contact with the cable screen. Connectors having "dimples" which improve the contact between the plug and socket shells, are recommended.

# 1 Product Overview

The MV-800 brings a wealth of previously unseen capabilities in a router-integrated multiviewer. The multiviewer 'engine' within the unit is a Grass Valley MV-8 Series multiviewer. One or more can be added into any existing Sirius 800 router.

The MV-800 is available from Grass Valley, a Belden brand, as an option on a new Sirius 800 router from the factory or as an option to be installed in the field. A single MV-800 can drive up to 12 multiviewer display monitors.

Figure 1 MV-800 Multiviewer Video Walls and Screens

## 1.1 Integrated Multiviewer Benefits

- Monitor router input sources. No additional space required.
- · Lower cost.
- Reduced power consumption and cooling requirements.
- No signal cabling, simplified installation.
- · Control and monitoring integration using open protocols.
- H.264 streaming of all video sources on a multiviewer video wall.
- Flexible screen design from multi-channel quad-splits to flexible multi-tile screen layouts, shown in Figure 1.

Note: MV-8 Series Multiviewer:
For information about the MV-8 Series Multiviewer 'engine' within the MV-800 Integrated Multiviewer product, please refer to the 'MV-8 Series Multiviewer' User Manual.

## 1.2 Typical User Applications

The MV-800 Integrated Multiviewer is ideal for any user application that requires single or multiple displays. For example: Play out control rooms, multi-channel play out, studio galleries, OB trucks, post-production suites, and signal lines monitoring areas.

## 1.3 Features

With the development of advanced technology within the MV-800 Integrated Multiviewer, Grass Valley can offer some unique, powerful features:

#### Integrates into all Sirius 800 systems:

- Uses built-in dedicated multiviewer output slots.
- · Uses a dedicated internal multiviewer crosspoint.
- · Access to all router video inputs
- · No loss of router capabilities:
  - · Main router outputs.
  - · Redundancy.
  - · Routing capacity.
  - · Processing capability.
- More than one MV-800 per router, see Table 1.

Table 1 MV-800 in Sirius 800 series routers

Sirius 800 Router	Maximum number of MV-800's
Sirius 830	2-off
Sirius 840	3-off
Sirius 850	2-off

#### Display up to 48 router inputs (sources) per MV-800 on multiviewer video walls:

- Sirius 830 select from the router's 288 inputs.
- Sirius 840/850 select from the router's 576 inputs.

#### Advanced broadcast media monitoring.

- Media biometric signature generation for all MV-800 inputs.
  - Low-bandwidth video and audio signatures streamed.
  - Applications include: Lip sync, Channel mapping detection, Confidence Monitoring. Identification and comparison.
- HDR support.

#### Up to 48 internal scalers:

- One per MV-800 input. One per video wall "video" tile.
- Each scaled picture may be used multiple times on the multiviewer video wall.

#### **Total multiviewer screen layout flexibility:**

- Additionally display web pages, automation play lists, device status screens etc.
- Display status and alarms from external devices.
- Drag and Drop objects onto the screen layout.
- Adjustable layering, transparencies and fine-positioning.
- Monitoring of video, audio and metadata, with alarm notification.
- Intelligent monitoring of external devices, with configurable on-screen alarms.
- Control and acknowledgment of alarms from hardware- and soft-panels.

#### Up to 12 display outputs per MV-800, connections to monitor display screens:

- 3G 1080p, HD 720p.
- Display outputs:
  - 4 display outputs on baseline MV-800 model.
  - Up to 12 display outputs per MV-800, enabled with licensed options.
- Four display outputs can be used together to provide a 4K UHD quad-link.
- Display outputs use flexible SFP modules.
  - Outputs can be a mixture of 3G SDI dual-coax or dual-fiber SFPs, or single-HDMI SFPs.

#### Streaming out of MV-800 inputs:

- MV-800 multiviewer inputs can be H.264-encoded to create streamed copies which can then be streamed out over IP.
- MV-800 input video streams can be viewed on a desktop PC with appropriate software. See the 'MV-8 Series Multiviewer' user manual.

## 1.4 Integration into Sirius 800 Routers

The MV-800 Multiviewer fits into dedicated multiviewer module slots in a Sirius 800 router frame. More than one MV-800 may be fitted to a router.

The Sirius 800 internal router architecture allows the MV-800 to tap into the signal flow within the router at the input signals, just before the main router crosspoint. Figure 2 shows a Sirius 800 router block diagram which includes up to three MV-800 Integrated Multiviewer units.

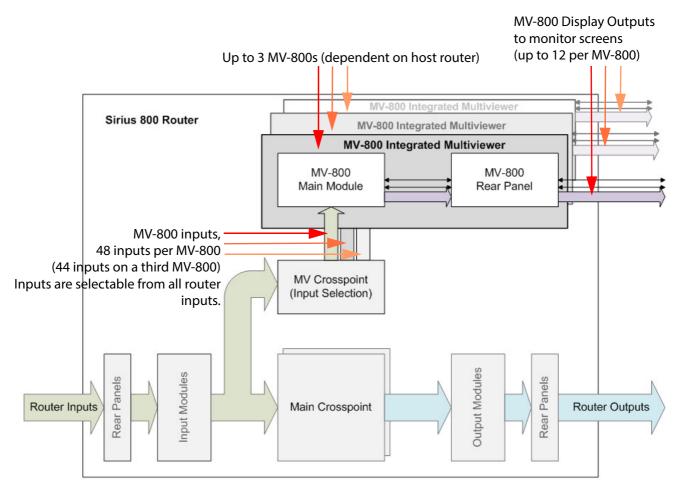

Figure 2 Sirius 800 Router block diagram, with MV-800 Integrated Multiviewer(s)

The MV-800 uses a Sirius Multiviewer Crosspoint module (MV Crosspoint) to select which of the router inputs the MV-800 can monitor. This is an auxiliary crosspoint which is dedicated to multiviewer use. A Sirius 800 Multiviewer Crosspoint module is required for the MV-800.

Thus, the addition of an MV-800 Integrated Multiviewer into a Sirius router retains the router's:

- Main outputs.
- Main Crosspoint redundancy.
- Processing capability on all router inputs and outputs.

## 1.5 MV-800 Main Input and Output Connections

Figure 3 shows the MV-800 Integrated Multiviewer with its MV-8 Series Multiviewer and main inputs and outputs, comprising:

- 48 inputs:
  - Selected from all router inputs via the MV Crosspoint module.
  - Mapped to router destinations.
     For mapping details, see Table 11, "Router Destination Matrix Port Number Mapping for MV-800 module slots," on page 42.
  - Note: There are 44 inputs on the third MV-800 fitted into a router.
- Ethernet connections:
  - 2-off 1G Communications traffic and H.264 streaming out of multiviewer inputs.
- LTC and GPIO
- Display screen outputs:
  - Up to 6-off SFPs.
  - Up to 12 outputs for monitor display screens.
  - Outputs available in SDI coax, fiber or HDMI.

**Note:** There is only one HDMI connector per HDMI SFP. Thus, there are only up to 6 HDMI display outputs.

4K-capable outputs via quad-link 3G-SDI.

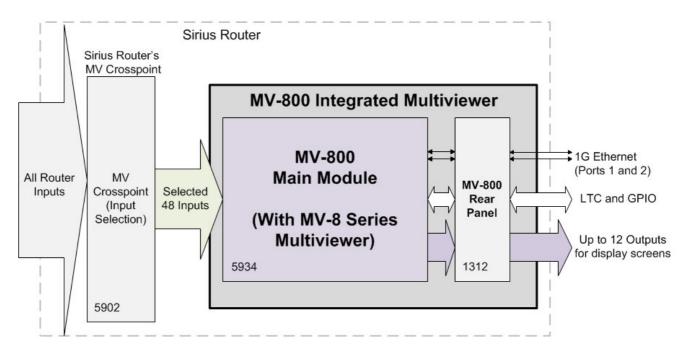

Figure 3 MV-800 Main Input and Output Connections

For more detailed information about external connections to MV-800, see Section 2 "MV-800 Hardware Modules".

## 1.6 MV-800 Components

The MV-800 Integrated Multiviewer option consists of some hardware modules fitted into front and rear slots of a Sirius 800 router frame. The multiviewer may be purchased already fitted into a new Sirius 800 router from Grass Valley or bought separately as a hardware upgrade option, to be fitted to an existing Sirius 800 router. One or more MV-800's may be fitted to a router.

MV-800 Hardware Installation, on page 21 shows which Sirius router frame slots are used for the MV-800.

When fitting the MV-800 into an existing router, the relevant router slots may already be used by other Sirius 800 option modules and, in this case, some or all of those modules need to be removed as part of the MV-800 installation.

For example, an existing router may already be fitted with the Sirius Multiviewer Output option (i.e. router SDI outputs provided for an *external* multiviewer). If in doubt, contact Grass Valley Support.

The MV-800 Integrated Multiviewer requires:

- 1-off router front module slot and its corresponding rear module slot, per MV-800, in a router frame.
- 1-off Sirius 5902 Multiviewer Crosspoint module fitted to the router.
- Sirius 800 router controller software version 3.17.4 or later.
- Grass Valley RollCall Control Panel software version 4.16.11 or later.
- Grass Valley Orbit Client software version 2.1 or later.

One MV-800 comprises a front module (5934) and a rear module (1312). Several factors determine the parts required for an MV-800 installation, including:

- Model of Sirius router.
- Existing router options fitted.
- How many MV-800's are being fitted to the router.

The list of front modules, rear panels etc. required for an MV-800 installation is given in Table 2.

Table 2 List of Front Modules and Rear Panels etc required for an MV-800 router installation

Part	Sirius Router			Comment
rait	830	840	850	Comment
5934 MV-800 Main Module	1 or 2-off	1, 2 or 3-off	1 or 2-off	5934 and 1312 ordered in pairs.
1312 MV-800 Rear Panel	1 or 2-off	1, 2 or 3-off	1 or 2-off	oracica in pairs.
SFP video modules:	6-off per 1312	6-off per 1312	6-off per 1312	6-off SFPs per 1312 rear module.  Mixture of video SFP modules and SFP blanking plugs. See <b>Note 1</b> .  Baseline MV-800 is licensed for 4-off display outputs, i.e. 2-off SFP video modules, enough for a 4K display.  SFPs may be supplied separately or already fitted to each 1312 Rear.
5902 Multiviewer Crosspoint Module	1-off	1-off	1-off	(Required if not already fitted to router)

### **Note 1:** Total 6-off SFPs per 1312, comprising:

- Minimum 2-off: SFP video output modules.
   (Depending on MV-800 licensing option purchased.)
- Up to 4-off: SFP blanking plugs.

#### SFP type:

- CC-TTH-3G-N (SDI).
- ST31ST31-3 (Fiber).
- FC1-HDMI2 (HDMI).
- SFPBLANK.

See MV-800 Hardware Installation, on page 21 for hardware installation instructions.

# 1.7 Order Codes

Table 3 Order Codes

	Order Code	Description	
	MV-800	MV-800 Integrated Multiviewer main module, includes license for 4 display outputs. (Display outputs 1 to 4.)	
		Grass Valley module number 5943.	
MV-800-RP		MV-800 Multiviewer Rear Panel, with SFP cages for accepting SFP video output modules.	
		SFPs ordered separately.	
		Grass Valley module number 1312.	
Additional Licenses		For the MV-800 unit: Additional display outputs.	
		A license comprises a code to enable more outputs:	
	MV-800-OP56	Upgrade to enable outputs 5 and 6. SFPs ordered separately.	
	MV-800-OP78	Upgrade to enable outputs 7 and 8. SFPs ordered separately.	
	MV-800-OP910	Upgrade to enable outputs 9 and 10. SFPs ordered separately.	
	MV-800-OP112	Upgrade to enable outputs 11 and 12. SFPs ordered separately.	
SFP Modules:		One SFP video module offers: 2-off SDI outputs (coaxial or fiber) or 1-off HDMI output.	
	CC-TTH-3G-N	Multiviewer HD-BNC Dual Output SFP module.	
		Multiviewer Fiber Dual Output SFP module (1310 nm, single mode).	
	FC1-HDMI1	HDMI single output SFP module	
	SFPBLANK	SFP blanking plug (dust and EMC cover).	
Also F	Required:		
	5902	Sirius 800 series Multiviewer Crosspoint module, unless a 5902 module is already fitted to the router.	
		Only one required per Sirius 800 router frame.	
Deskt	top Multiviewer:		
	MV-800-DT	MV-800 Desktop Multiviewer. This is a license option code to enable display of streaming IP sources from an MV800 on a desktop multiviewer.	
		One license per seat.	

## 1.8 Multiviewer Terminology

Note: For a glossary of multiviewer terminology, refer to the 'MV-8 Series Multiviewer' user manual.

## 1.9 MV-800 Set up

#### 1.9.1 Hardware Installation

Hardware installation of the MV-800 Integrated Multiviewer is described in MV-800 Hardware Installation, on page 21.

#### 1.9.1.1 Power Supply Considerations

#### **CAUTION Power supply considerations:**

It is likely that your Sirius router already has enough power supply capacity to power the additional MV-800 Integrated Multiviewer modules.

However, there are many different Sirius 800 system module combinations. Therefore, before adding an MV-800 to a Sirius 800 router, check that the configuration of power supplies fitted to your router can supply sufficient power to the MV-800 Multiviewer:

- See the 'Sirius 800 Router' user manual for router power requirements.
- See Appendix A MV-800 Specification, on page 47, for MV-800 power requirements.
- Contact Grass Valley support for advice.

Note: Upgrading of the Sirius 800 router controller software is described the 'Sirius Maintenance and Upgrade Manual', Section 9, "Nucleus Upgrade and Maintenance".

## 1.9.2 Initial MV-800 Configuration

Each MV-800 is configured separately.

Typically, a new MV-800 will be using a default IP address (10.54.31.221, 10.54.31.226 or 10.54.31.231) on Ethernet port 1 ("1G1"). See Appendix A MV-800 Specification, Table 14 on page 51, for default IP addresses on all network ports.

Initial configuration and set up of the MV-800 multiviewer is done via Grass Valley's RollCall Control Panel application. See the 'MV-8 Series Multiviewer' user manual, in the section about RollCall templates and "Getting Started".

#### 1.9.3 Configuration Screens (RollCall Templates)

Following the initial configuration of the MV-800 Multiviewer, the RollCall Control Panel tool may then be used to access RollCall templates and control various MV-800 items, including the selection of video wall layouts, monitoring alarm status, acknowledging alarms and control of timer widgets on the video wall.

Refer to the 'MV-8 Series Multiviewer' user manual for full details of the MV-800 module's RollCall templates and configuration information.

## 1.9.4 Video Wall Design

The layout and style of the MV-800 video walls are designed with the Grass Valley Orbit software application. Wall designs are stored as individual projects (Grass Valley Orbit projects), which are pushed to an MV-800 for use. Multiple wall layout designs may be generated and stored on a PC. Different wall designs can then be pushed to the multiviewer for various MV-800 multiviewer applications.

Note: For information about the design and management of MV-800 multiviewer video wall layouts with the Orbit application, refer to the 'MV-8 Series Multiviewer' user manual.

### 1.10 Maintenance

#### 1.10.1 Multiviewer Licensing

Note: For information about licensing the MV-800 multiviewer, refer to the 'MV-8 Series Multiviewer' user manual.

## 1.10.2 Multiviewer Software Upgrade

Note: For information about software upgrading the MV-800 multiviewer, refer to the 'MV-8 Series Multiviewer' user manual.

# 1.11 MV-800-DT Desktop Multiviewer Option

The MV-800-DT desktop multiviewer provides live video wall capabilities to a PC, extending the capabilities of the MV-800. It is used with the Grass Valley Orbit software. Live information on a MV-800-DT video wall includes video, audio levels and alarms. The MV-800-DT video wall can display live video from one or more MV-8X0 multiviewer units. It can show the same video wall as an MV-8X0 Multiviewer unit or it can show a different video wall layout.

See the 'MV-8 Series Multiviewer' user manual for more information.

# 2 MV-800 Hardware Modules

MV-800 hardware primarily comprises:

- Main front module (5934). (MV-800 Multiviewer Front Module (5934) on page 12.)
- Rear panel module (1312). (MV-800-RP Multiviewer Rear Panel (1312) on page 15.)

These are described in this section.

MV-800 installation also requires a Sirius 800 Multiviewer Crosspoint module (5902) fitted in the router frame. The 5902 module is described in the Sirius 800 User Manual.

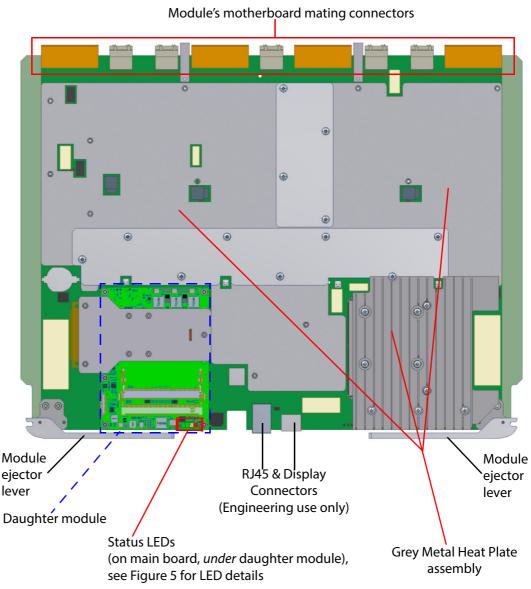

### **CAUTION Electrostatic Damage**

Static precautions must be observed when handling, inserting or removing modules.

## 2.1 MV-800 Multiviewer Front Module (5934)

The 5934 MV-800 Integrated Multiviewer module is a full-sized Sirius router front module. It is a single-height module, occupying one slot in the router frame. The top-side of the module is mostly covered with a gray metal heat plate.

More than one MV-800 may be fitted to a router, see Table 1 on page 2.

**Note:** Module's main component side is shown, which is upper-most in the router frame.

Figure 4 MV-800 Integrated Multiviewer Module (5934)

### 2.1.1 Front Module Status LED Indicators

Table 4 shows the LED color codes for the MV-800 module, and Figure 5 shows the front edge of the module.

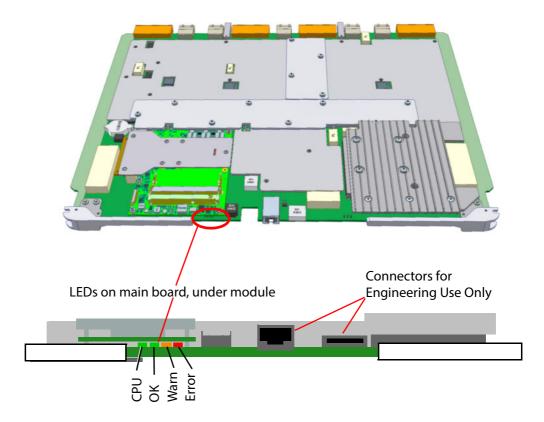

Figure 5 MV-800 Integrated Multiviewer Front Module (5934) LEDs

Label	LED Color	Detail	Status
СРИ	Green	CPU Heartbeat	Flashing (2Hz): Working correctly.  Solid On or Off: software fault detected. Contact Grass Valley Customer Support (Grass Valley Technical Support on page 53 for contact details).
ОК	Green	Hardware Communications	Flashing (2Hz): hardware communications fault detected, contact Grass Valley Customer Support (Grass Valley Technical Support on page 53 for contact details).
WARN	Amber	Over Temperature Warning	Off: Working correctly.  On: MV-800 module overheating - make sure the router frame fan assemblies are all closed and the fans are all operating correctly.
ERROR	Red	Error	Off: Working correctly.  On: Hardware fault detected. Contact Grass Valley Customer Support (Grass Valley Technical Support on page 53 for contact details).

Table 4 5934 MV-800 Integrated Multiviewer Module LED Information

### 2.1.2 DIP switches

The four DIP switches are not used. Check that all four switches are in the "up" position.

## 2.1.3 Engineering connectors

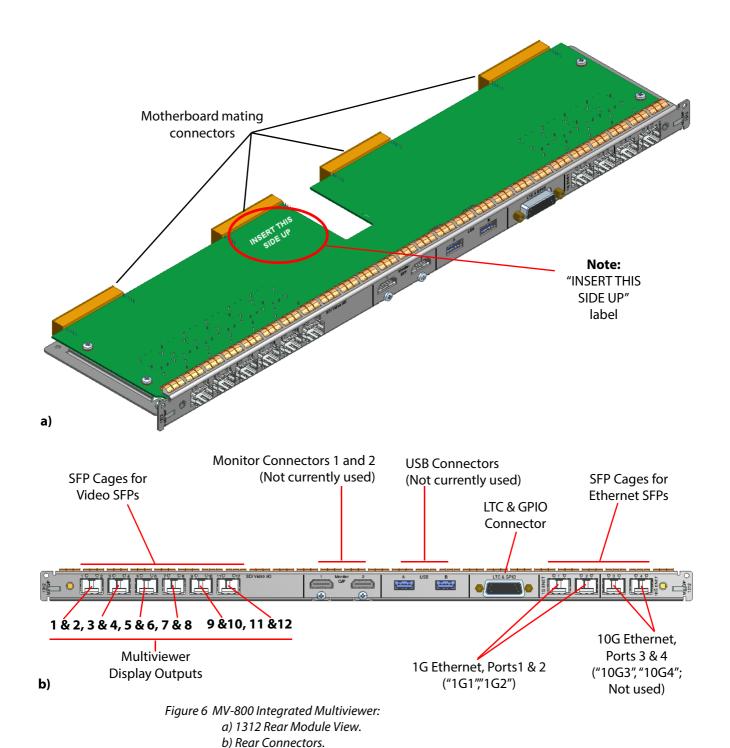

There are two other connectors on the front edge of the module, see Figure 5. These are for Engineering use only and should not be used.

## 2.2 MV-800-RP Multiviewer Rear Panel (1312)

#### **CAUTION Electrostatic Damage**

Static precautions must be observed when handling, inserting or removing modules.

There are up to 12 multiviewer display outputs from the MV-800:

- 2 outputs per SDI coax or fiber SFP video module.
- 1 output per HDMI SFP video module.

The Multiviewer display outputs come from SFP modules fitted into the SFP cages on the MV-800 Rear Panel module's rear plate. SFP blanking plugs must be fitted if an SFP is not fitted into any of the cages.

#### 2.2.1 Connectors

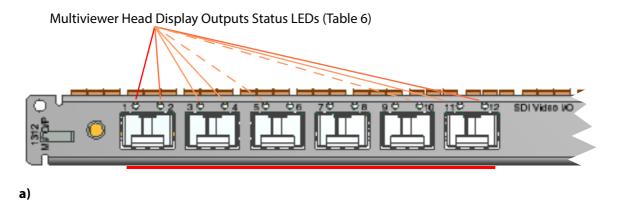

Table 5 describes each connector type.

Table 5 MV-800 Integrated Multiviewer 1312 Rear panel Connectors

Description				
Multiviewer video wall display outputs.				
6-off SFP cages for SFP modules [See note 1]:				
2-off SDI Coax outputs per SFP,				
<ul> <li>or 2-off SDI Fiber outputs per SFP,</li> </ul>				
or 1-off HDMI output per SFP.				
Not currently used				
Not currently used				
26 Way High Density "D" Type female connector,				
see Table 8 on page 19 for pinout details.				
2-off 1 Gbps, SFP+ Ethernet sockets, RJ45				
2-off 1 dbps, 5FF+ ethernet sockets, k345				
2-off 10 Gbps, SFP+ Ethernet sockets, RJ45				
(10G network interfaces. Not used.)				
Note 1: SFP blanking plugs must be fitted if no SFP is present.				

#### 2.2.2 Rear Panel LEDs

Multiviewer head display outputs and Ethernet ports have LED status indicators, see Figure 7.

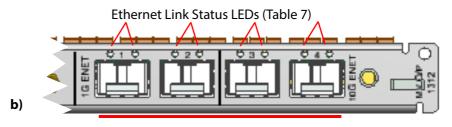

Figure 7 MV-800 Rear Panel LEDs: a) Multiviewer Head Display Outputs. b) Ethernet Ports

### 2.2.2.1 Multiviewer Head Display Outputs

One status LED per output. Table 6 describes the LED function.

Table 6 Multiviewer Head Display Output Status LED

Color	LED	Status
Blue		Licensed Output; SFP Fitted. 1080p video output signal.
Blue / White Flashing		Flashes Blue/White at 1Hz. Licensed Output; SFP fitted. 1080p with embedded audio.
Green		Licensed Output; SFP Fitted. 720p video output signal.
Green / White Flashing		Flashes Green/White at 1Hz. Licensed Output; SFP fitted. 720p with embedded audio.
Red		Licensed Output; No SFP Fitted.

Table 6 Multiviewer Head Display Output Status LED (Continued) Color **LED Status** Off OFF Unlicensed output. **Red / Green Flashing** Flashes Red/Green at 1Hz during an internal FPGA upgrade (part of a unit software upgrade). **Red Flashing** Flashes Red/Off at 1Hz after a unit software upgrade if: ..... internal FPGA upgrading was unsuccessful; or internal FPGAs fail to load during unit boot. Note: A unit upgrade to the same version may be carried out to recover a unit if FPGA upgrading was unsuccessful. Otherwise, contact Grass Valley support.

#### 2.2.2.2 Ethernet Outputs

Two status LEDs per port. Table 7 describes the LED function.

Table 7 Ethernet Port Status LEDs

Color	LEDs	Status		
Green / Off	OFF	Ethernet link established		
Green Solid / Flashing	***	Activity on Ethernet link		
Off / Off	OFF OFF	Establishing link, or unconnected.		

### 2.2.3 LTC and GPIO Connector Pin-outs

Female high density 26 way 'D' type connector assignments

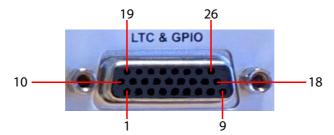

Figure 8 Female High Density 26 Way 'D' Type LTC and GPIO Connector

The following table gives the pin assignments for the LTC and GPIO connector:

Table 8 Female High Density 26 Way 'D' Type LTC and GPIO Connector

Pin Number	Signal	Pin Number	Signal
1	+5 Vdc Out	14	GND
2	+5 Vdc Out	15	GND
3	Do Not Connect	16	GND
4	nc	17	GND
5	nc	18	GND
6	Do Not Connect	19	nc
7	Do Not Connect	20	Do Not Connect
8	nc	21	nc
9	LTC+	22	GPI 1
10	nc	23	GPI 2
11	nc	24	GPI 3
12	nc	25	GPI 4
13	GND	26	LTC-

**Note:** 'nc' denotes a "not connected" connector pin.

Note: MV-800 GPI outputs - Open collector outputs. Require external pull-up resistors of value between 10 k $\Omega$  and 100 k $\Omega$ . Each output can sink up to 100 mA.

- "+5 Vdc Out" pins are provided on the connector for this purpose.
- Maximum voltage, +5 V.
- See Section 2.2.4 "Example: Driving LEDs from the GPI Outputs" for an example of how GPI outputs can be used to drive LEDs.

Note: MV-800 GPI inputs - Inputs have weak internal pull-down resistors.

- Can be driven by input voltages of up to +5 V.
- A logic "low" input is represented by an input voltage below +0.8 V.

# 2.2.4 Example: Driving LEDs from the GPI Outputs

MV-800 GPI outputs have open collector drivers. There is a +5 V dc pin on the GPIO connector to provide the power needed to drive LEDs or relays.

The following schematic is an example of the circuit needed to drive an LED by each GPI output. MV-800 GPIO connector pin names and numbers are shown on the left.

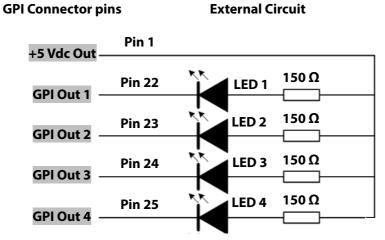

Figure 9 Connecting LEDs to GPI Outputs

#### **CAUTION**

## **Electrostatic Damage**

Static precautions must be observed when inserting and removing cards.

#### 3.1 Introduction

This section describes the installation of the MV-800 Integrated Multiviewer Integrated Multiviewer hardware. Installation can be carried out while the Sirius 800 router is operating, without impacting the main routing function.

Note: If your Sirius 800 router has been purchased from Grass Valley with the MV-800 Integrated Multiviewer Integrated Multiviewer option already fitted, then

the MV-800 hardware installation task just comprises making connections to the MV-800 Integrated Multiviewer Rear Panel at the rear of the router

(See Connecting Cables, on page 39).

If the MV-800 Integrated Multiviewer is being fitted to an existing, installed router, then the router frame's module slots for the MV-800 hardware must be identified. Slot identification is part of the MV-800 Integrated Multiviewer hardware installation instructions contained in this section.

An MV-800 Integrated Multiviewer Quick Setup Guide is shipped with the module and is also available as a download from Grass Valley.

#### **CAUTION**

#### **Electrostatic Damage**

Static precautions must be observed when handling, inserting or removing modules.

Product Overview, on page 1 lists the MV-800 Integrated Multiviewer product's option components, see MV-800 Components, on page 6 and Order Codes, on page 8.

MV-800 hardware installation comprises the following steps:

- 1 Initial Checks and Actions, on page 22.
- 2 Identifying Modules and Slots in Router, on page 25.
- 3 Removal Preliminaries, on page 33.
- 4 Module Removal Procedure, on page 34.
- 5 Fitting Preliminaries, on page 35.
- 6 Connecting Cables, on page 39.

The following sections describe these installation steps. More than one MV-800 unit may be fitted to a Sirius router and these instructions cover the fitting of one or more units.

The router may already have some options installed in the module slots required for the MV-800 Integrated Multiviewer option. These installation instructions do not assume the presence or absence of any particular option modules already in the router.

The Sirius 800 router controller software version installed on the router must support the MV-800 Integrated Multiviewer Integrated Multiviewer option. Upgrading the Sirius 800 router controller software, if required, can be carried out either before or after the MV-800 Integrated Multiviewer hardware installation.

#### 3.2 Initial Checks and Actions

#### 3.2.1 Router Model Check

One or more MV-800 Integrated Multiviewer modules may be fitted into a Sirius 800 router.

### 3.2.2 Router Frame Check

The MV-800 Integrated Multiviewer modules must only be fitted into a Mark 3 type Sirius 800 router frame.

This router frame type has a blue fan rack (see Sirius 800 User Manual, section 3.12.1, Table 5).

#### **CAUTION**

Fit MV-800 Integrated Multiviewer modules into a Sirius 800 *Mark 3* router frame.

The fitting of one or more MV-800 Integrated Multiviewer modules into a Sirius 800 router frame affects the frame's operating temperature range. See table note in Appendix A Physical/Electrical, on page 47.

#### 3.2.3 Power Checks

Your Sirius 800 router may already have enough power supply capacity to power the additional MV-800 Integrated Multiviewer module(s).

However, there are many different Sirius 800 system module combinations. Therefore, before adding any MV-800 Integrated Multiviewer's to a Sirius 800 router, check that the configuration of power supplies and modules fitted to your router can supply sufficient power to the MV-800 Integrated Multiviewer(s):

A router's available power supply capacity depends on:

- Complement of modules fitted to the router.
- Power Supply Modules fitted to the router.
- Whether the MV-800 Integrated Multiviewer replaces any currently-fitted modules and their module type.

#### **CAUTION**

#### **Power supply considerations:**

The Sirius router must have enough power supply capacity to power any MV-800 Integrated Multiviewer modules being fitted.

Check that the configuration of power supplies fitted to your router can supply sufficient power to the MV-800 Integrated Multiviewer Multiviewer:

- See Sirius 800 User Manual for router power requirements.
- See Appendix A MV-800 Specification, on page 47 for MV-800 Integrated Multiviewer power requirements.
- · Contact Grass Valley support for advice.

### 3.2.4 Fitting of Video SFPs to MV-800 Rear Panel

Before fitting the MV-800 Rear Panel (1312) into the router frame, first fit any SFP video modules, if this has not already been done. This sub-section provides SFP video module fitting guidelines.

Note: It is possible to hot-plug SFP modules but this is not recommended here.

Because it is easier and more practical to fit them to the MV-800 Rear Panel before it is fitted into the router frame.

Figure 10 Coax and fiber SFP video modules

Note: The normal orientation of the MV-800 1312 Rear Panel in the router has the printed circuit board upper-most, see Figure 11. This affects the orientation of each SFP when fitting into the target router.

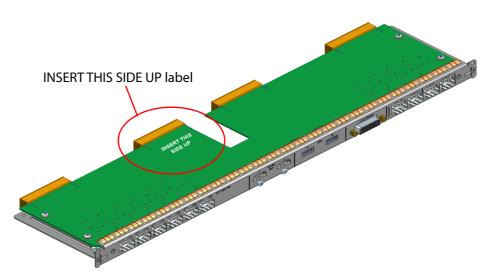

Figure 11 1312 MV-800 Rear Panel orientation, showing "INSERT THIS SIDE UP" label.

Before inserting the SFP modules, take notice of the required SFP orientation for fitting into the SFP cages of the MV-800 Rear Panel, as shown in Figure 12.

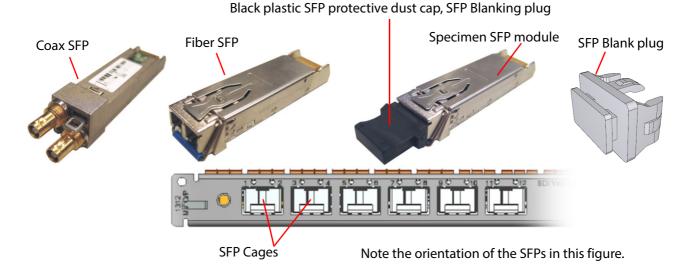

Figure 12 SFP orientation for fitting into 1312 Rear Panel SFP cages

Insert the SFP video modules into the SFP cages on the MV-800 Rear Panel (1312). The modules slide in until there is an audible click.

Start by filling the SFP cage for output pair 1 & 2, then 3 & 4 etc. see Figure 13. Fill any remaining slots with SFP blanking plugs (SFP-BLANK).

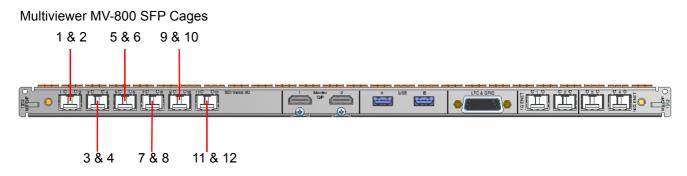

Figure 13 MV-800 outputs 1 to 12

SFP module removal, if required, is achieved by operating a small lever or lever-bar on the SFP module before sliding the SFP video module out of its cage.

## 3.3 Identifying Modules and Slots in Router

This sub-section locates the slots in the router frame for the MV-800 Integrated Multiviewer Integrated Multiviewer and identifies the module types required. Slots must be located precisely in the router frame to ensure correct and swift MV-800 Integrated Multiviewer hardware installation, and to avoid the risk of disruption to the router and its operation.

To help locate the relevant slots for the MV-800 Integrated Multiviewer option, please refer to the Sirius 800 User Manual ("Module Location" section) and also to the figures in this section.

**Step 1.** Locate the relevant section of the router frame.

Table 9 states which part of the upper section of the router frame (both front and rear) to look at. This is shown in Figure 14.

Table 9 Section of Router Frame for MV-800 Integrated Multiviewer installation

Router	Section of router frame	Comment
Sirius 830	Above the horizontal Main Crosspoint module slots	The Main Crosspoint slots are: 2-off half-width Audio Crosspoints + 2-off full-width Video Crosspoints.
Sirius 840	Above vertical Input module slots	-
Sirius 850	Above vertical Input module slots	-

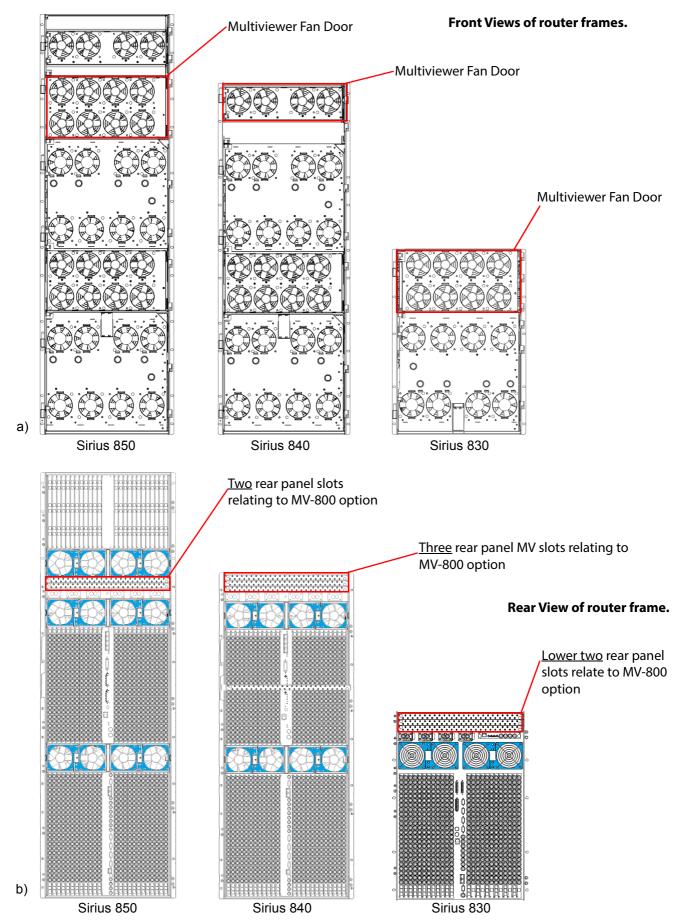

Figure 14 Sirius 800 sections of the router frame for MV-800 option installation, a) front Multiviewer Fan Doors and b) Rear Panel Section

**Step 2.** Locate and identify the relevant router frame slots relating to the MV-800 Integrated Multiviewer option. These are all horizontal slots.

Refer to Figure 15, Figure 16 or Figure 17 for Sirius 830, 840 and 850 respectively.

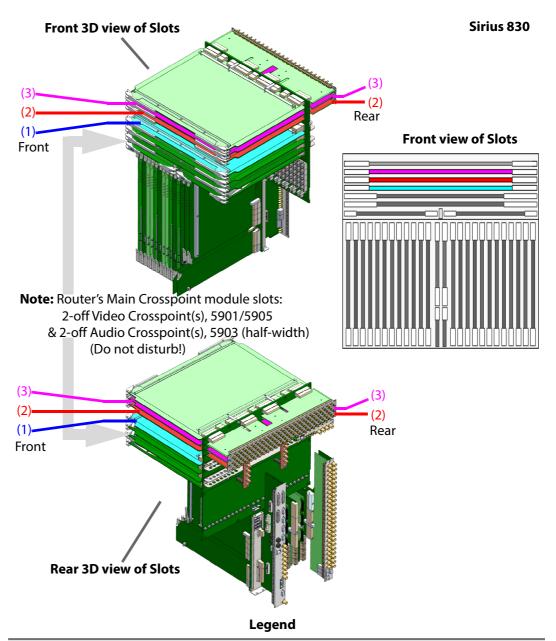

These figures show skeletal drawings of a full complement of router modules, internal cards and rear panels. Relevant slot locations for the MV-800 option are highlighted and annotated with the types of module and types of rear panel allowed in an MV-800 installation.

#### **IMPORTANT**

Do not disturb any of the router's other modules, otherwise router operation may be affected.

### **IMPORTANT**

Only open router fan doors for less than 2 minutes and ensure they are fully closed afterwards. This ensures continued cooling of the router.

Front Slots	Rear Slots
(3) * 5934 MV-800 Main Module	(3) * 1312, MV-800 Rear Panel Or Blanking Panel
(2) 5934 MV-800 Main Module	(2) 1312, MV-800 Rear Panel
(1) 5902 Multiviewer Crosspoint Module	
* Possible second MV-800. Otherwise,	fit Blanking Rear Panel.

Figure 15 Sirius 830 - Relevant Module Positions for MV-800 modules

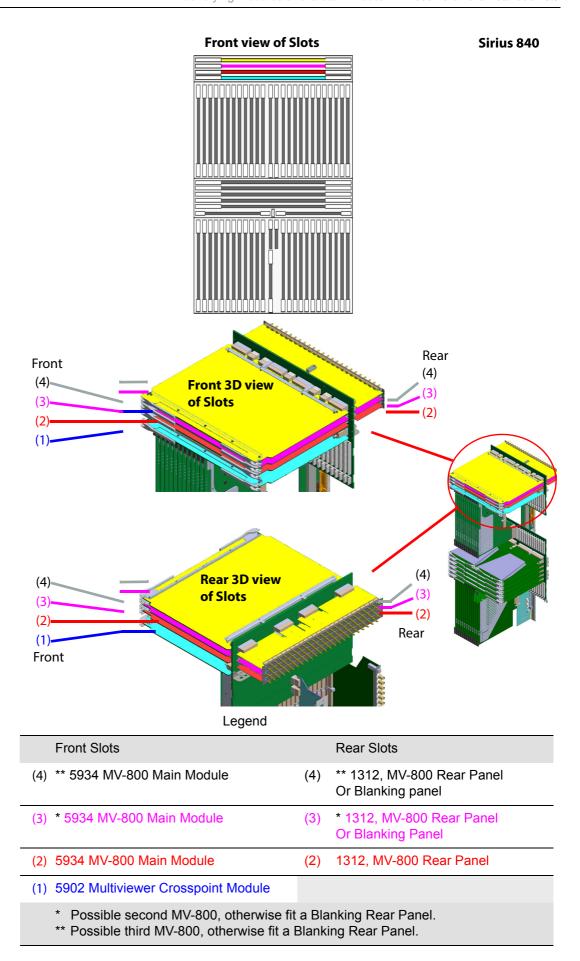

Figure 16 Sirius 840 - Relevant Module Positions for MV-800 modules

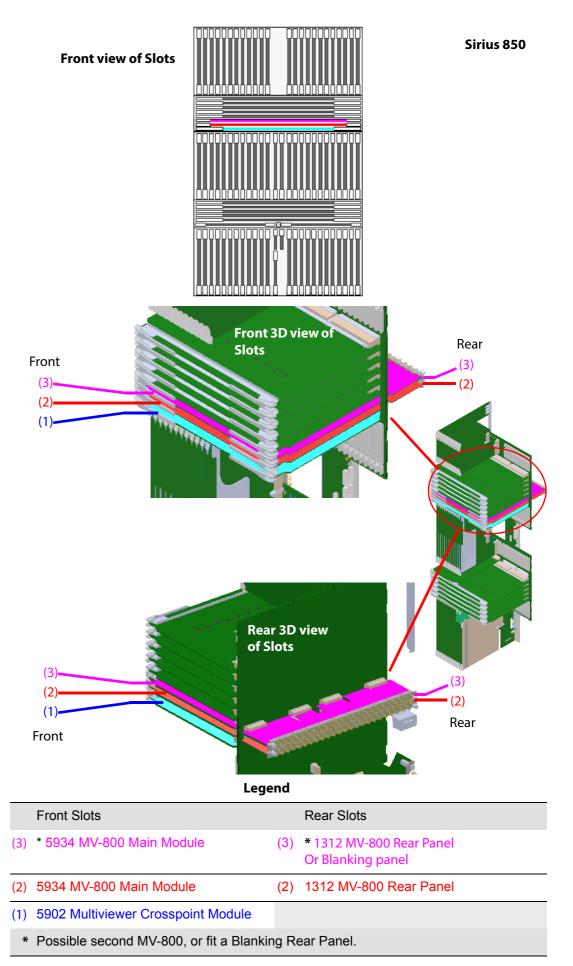

Figure 17 Sirius 850 - Relevant Module Positions for MV-800 modules

Note: The slot labeling nomenclature used in Figure 15, Figure 16 and Figure 17 will continue to be used in this section.

Thus, front Slot (1) will refer to the front slot labeled (1) in the figures etc.

- **Step 3.** For the modules *already* fitted to your router, record the module type and slot location in the left-hand side columns of the record sheet in Table 10, in the columns headed "Before fitting MV-800" column.
- **Step 4.** The types of modules that are required for your MV-800 installation are listed in the right-hand side columns of the record sheet in Table 10, in the columns headed "After fitting MV-800"

Table 10 Record Sheet: Modules and Rear Panels, Before and After MV-800 Installation:

- a) Sirius 830 router frame,
- b) Sirius 840 router frame,
- c) Sirius 850 router frame.

Where (1), (2), (3) etc. refer to slot labels in Figure 15, Figure 16 and Figure 17.

For any other possible combination of modules, please contact Grass Valley support.

Note: When completed, Table 10 will indicate which modules need to be removed for MV-800 installation.

### 3.4 Removal and then Fitting of Modules

This section covers the removal of any existing modules from relevant slots in the router frame and then the fitting of modules for the MV-800 Integrated Multiviewer option.

Modules may be fitted while the router is powered up.

#### 3.4.1 Removal Preliminaries

Some warnings and points of note are provided below: The following removal and fitting procedures is designed to comply with these points.

CAUTION Ensure both of the *front and rear slots* in the router frame are *first empty* before inserting the MV-800 Integrated Multiviewer Main Module or MV-800 Rear Panel.

#### This is because:

- MV-800 front Main Modules must not be accidentally connected to any other rear panels already fitted in the router frame.
- MV-800 Rear Panels must not be accidentally connected to any other front modules already fitted in the front of the router frame.

Thus, these instructions are deliberately written in two stages:

- Removal. (See Module Removal Procedure on page 34)
- Then fitting. (See Fitting Preliminaries on page 35)

This avoids any interim incompatibility between front and rear modules during fitting, which may damage the modules and the router.

Note: Fit the 1312 MV-800 Rear Panel(s) before fitting the front 5934 MV-800 Main Module(s).

Note: The fan door assemblies should be returned to the closed position as soon as possible after opening. This ensures correct ventilation and operation of the router frame.

#### In practice:

- Maximum time that a fan door may be left open will depend on a number of factors, such as: ambient temperature, router frame loading, crosspoint routing, etc.
- To ensure correct operation under all conditions the fan assemblies should be left open for no more than 2 minutes at a time.
- Take care not to trap any cables when opening and closing the fan doors.

To minimize the time that router frame doors and fan doors are open, ensure that you understand which modules need to be changed and where they are located:

Table 10 gives the *before* and *after* module configuration.

Read through the following installation steps and notes to ensure that you understand them before installing the MV-800 option.

Prepare all required modules, rear panels and other components.

Relevant router frame slots for MV-800 Integrated Multiviewer installation are Slot (1) through to Slot (4) in Figure 15, Figure 16 and Figure 17.

Front modules plug into the router's internal motherboard and connect to their respective rear modules. This front-and-rear slot arrangement and the slot labeling is restated in the diagram in Figure 18, which is a side view of the card arrangement.

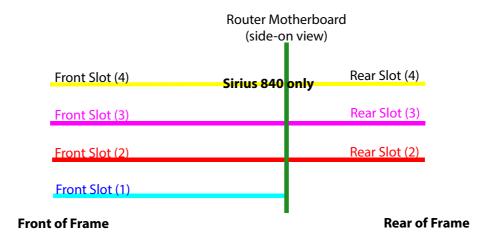

Figure 18 Side-on View of Front and Rear slot arrangement (Labeling from Figure 15, Figure 16 and Figure 17.)

The relevant slots need to be emptied first before fitting the MV-800 option hardware.

#### 3.4.2 Module Removal Procedure

## Electrostatic Damage

Static precautions must be observed when handling, inserting or removing modules.

Note: Rear module removal requires:

• A Pozidriv screwdriver suitable for pan head, M3 x 6 mm, zinc plated screws.

Refer to Removal Preliminaries, on page 33 before starting removal.

The first step is to empty *relevant* slots of front modules or rear panels. Table 10 indicates which slots should be emptied.

#### **Removal procedure:**

CAUTION

- 1. Start at the rear of the router:
- 2. Disconnect all cables connected to rear panel connectors for rear slots that need to be emptied.

#### **Rear module removal:**

3. Remove all rear modules for slots that need to be emptied. Unscrew two rear panel securing screws on each module; then remove the module.

#### **IMPORTANT**

When removing a module - Take care not to knock high components mounted on the top- or on the bottom-side of the module.

Any knock may damage the module being removed, or the modules above and below it in the router frame.

The rear slots are now emptied.

- 4. Now move to the front of the router.
- 5. Unlock and open the router front door and open the relevant internal fan door (refer to Figure 14).

#### Front module removal:

6. Remove all front modules from front slots that need to be emptied.

Remove a front module by pulling on the two module eject levers and sliding the module out of the frame.

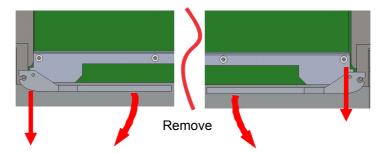

Figure 19 Removing Front Modules, showing use of module eject levers

7. Close and secure the internal fan door. Close and lock the router front door.

All relevant slots should now be empty, front and rear.

8. Continue immediately to read Section 3.4.3 Fitting Preliminaries, on page 35 before starting Module Fitting Procedure, on page 37.

### 3.4.3 Fitting Preliminaries

Note: The slot labeling nomenclature used in Figure 15, Figure 16 and Figure 17 (on pages 28, 29 and 30) is used in this section to identify the slots. Thus, for example, front Slot (1) refers to the front slot labeled (1) in the figures, etc.

#### **IMPORTANT Electrostatic Damage**

Static precautions must be observed when handling, inserting or removing modules.

Note: Rear module fitting requires:

- · A Pozidriv screwdriver
- Two pan head, M3 x 6 mm, zinc plated screws per rear module.

#### **IMPORTANT**

When inserting a module - Take care not to knock high components which are mounted on the top- or on the under-side of the module.

Any knocks may damage the module being inserted, or the modules above and below it in the router frame.

Note: When inserting a rear module into a rear slot:

- Check the module is the correct one for the slot.
- Check there are no obstructions at the module connectors.
- Check for any high components on the top- or under-side of the module. Do not knock these during fitting.
- Insert the module into the slot and slide the module into the frame
- In the last few millimeters of travel, the module connectors mate with the router motherboard. Some resistance will be met; ease, but do not force, the module in.
- If excessive resistance is met, remove the module and re-check that the module and slot are correct. Check the slot for any obstruction. Check the module connectors for any damage or foreign objects.
- Fasten the two module securing screws at the far left and far right of the module's rear plate. Gently tighten the fixing screws. Do not over-tighten them.

Note: When inserting a front module into a front slot:

- Check the module is the correct one for the slot.
- Check there are no obstructions at the module connectors.
- Check for any high components on the module's top- or under-side. Do not knock these during fitting.
- Insert the module into the slot and slide the module into the frame.
- When the module is nearly fully in the frame, gently push the module levers. See Figure 22
- In the last few millimeters of travel, the module connectors mate with the internal router motherboard. Some resistance will be met; ease, but do not force, the module in with the levers.
- If excessive resistance is met, remove the module and re-check that the module and slot are correct. Check the slot for any obstruction. Check the module connectors for any damage or foreign objects.
- In the final few millimeters of travel, the levers engage with the router frame, locking the module into position

Note: The slot labeling nomenclature used in Figure 15, Figure 16 and Figure 17 (on pages 28, 29 and 30) is used in this section to identify the slots.

Thus, Slot (1) refers to the slot labeled (1) in the figures, etc

Refer to Table 10 on page 32, this shows which modules may be fitted.

### 3.4.4 Module Fitting Procedure

Please ensure you have read Fitting Preliminaries, on page 35 before proceeding to fit modules.

1. Go to the rear of the router frame.

The procedure continues with the fitting of rear modules:

2. **Rear Slot (2):** Insert a 1312 MV-800 Rear Panel module into rear Slot (2). Check the orientation of the rear module, see Figure 20.

#### **IMPORTANT**

Ensure the 1312 MV-800 Rear Panel module is the correct way up, "INSERT THIS SIDE UP" label is printed on the top of the rear panel, see Figure 20.

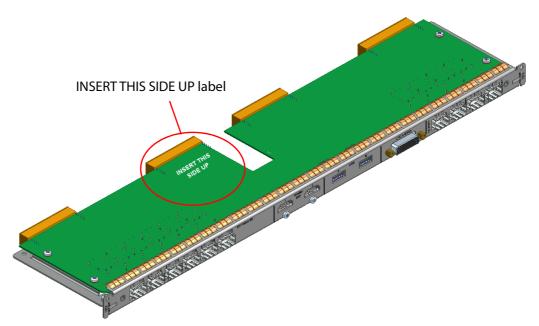

Figure 20 1312 MV-800 Rear panel module, showing "INSERT THIS SIDE UP" label.

3. Fasten the two rear panel module securing screws. Do not over-tighten them.

#### **IMPORTANT**

Do not over tighten the rear panel fastening screws.

- They should screw in without any resistance until the screw head secures the rear panel to the frame.
- If a rear panel fastening screw binds up then it should be removed and the screw and its alignment should be checked before the screw is refitted.
- 4. **Rear Slot (3):** Fit a second 1312 MV-800 Rear Panel module or a blanking plate (see Figure 21) to rear Slot (3).

Fasten the two rear plate-securing screws. Gently tighten. Do not over-tighten.

#### **IMPORTANT**

The risk of non-compliance and overheating is with the user if blanking plates are not fitted in unused rear slots.

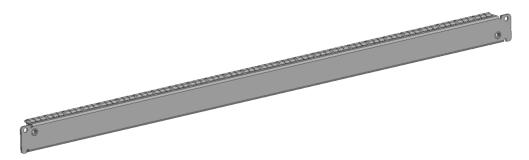

Figure 21 Rear Blanking Panel - for empty rear slots

**Rear Slot (4)**: (Sirius 840 routers only)

Fit a third 1312 MV-800 Rear Panel module or a blanking plate to rear Slot (4).

Fasten the two plate-securing screws. Gently tighten the fixing screws. Do not over-tighten them.

Rear modules are now installed.

- 6. Now go to the front of the router:
- 7. **Front Slot (1)**: Insert a 5902 Multiviewer Crosspoint Module into the empty slot. If the slot is already occupied, it should only be occupied with a 5902 Multiviewer Crosspoint Module.

If the slot is occupied with another type of module, then contact Grass Valley Support for advice.

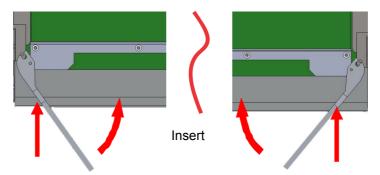

Figure 22 Inserting a Front Module with Levers

- 8. **Front Slot (2)**: Fit a 5934 MV-800 Main Module to front Slot (2). Be careful not to knock the high components on the top- and under-side of the module.
- 9. Front Slot (3): Fit a second 5934 MV-800 Main Module to front Slot (3) or leave empty.
- 10. **Front Slot (4)**: Fit a third 5934 MV-800 Main Module (Sirius 840 only) to front Slot (4) or leave empty.
- 11. Close and secure the front fan door assembly, making sure not to trap any wires.
- 12. Close and lock the router front door.

The MV-800 Integrated Multiviewer hardware is now installed in the router frame.

### 3.5 Connecting Cables

Now that the MV-800 Integrated Multiviewer option hardware is installed, some connections need to be made.

#### 3.5.1 Connecting the Network and Multiviewer Display Output(s)

Note: The MV-800 Integrated Multiviewer must initially be configured from a computer before being attached to the router's IT network. See MV-800 RollCall Configuration Screens on page 47

 Connect the MV-800 Integrated Multiviewer directly to a computer network port via 1G Ethernet port 1

(see Figure 23) using a standard CAT 5e Ethernet cable.

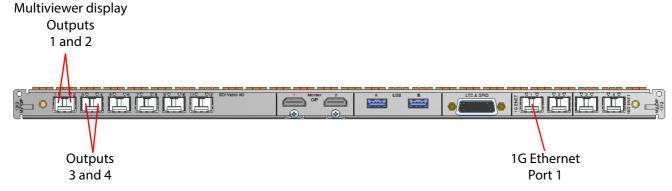

Figure 231312 MV-800 Integrated Multiviewer Rear panel Connectors

- 2. Connect up to 4 display monitor screens to display output ports 1 to 4.
- 3. If more display outputs have been licensed, then connect these.
- 4. See the MV-8 Series Multiviewer user manual for details about configuring the MV-800 multiviewer using its RollCall templates.

### **IMPORTANT**

#### **Ethernet connection:**

Check the logical and physical connection of all Ethernet ports to the MV-800 Integrated Multiviewer rear panel.

This is required for optimum MV-800 Integrated Multiviewer performance.

### **Explanation:**

The MV-800 Integrated Multiviewer has more than one Ethernet port with one IP address per Ethernet port.

However, even if a port is disconnected, its IP address can still be "seen" through other the Ethernet ports.

This means the MV-800 can still *appear* to be operating normally, i.e. with all Ethernet ports connected, even with one or more unconnected network ports.

There is a MV-800 performance penalty for operating in this way.

# 3.6 MV-800 Module Booting

Refer to the 'MV-8 Series Multiviewer' user manual for information about MV-800 module booting and start-up splash screen.

Note: The 'Eng' interface is a reserved internal IP network interface, do not use this interface.

# 4 Sirius 800 Router Configuration

The Sirius 800 router configuration needs to be updated to match the modules now fitted in the router slots for the MV-800 option. New modules may include:

- MV-800 modules, 5934 (front) and 1312 (rear).
- Multiviewer Crosspoint module, 5902.

Router configuration changes are done with the Grass Valley Workbench tool and include:

- Specifying Matrix Output Ports Specifying the extra crosspoint destinations to be a multiviewer and making name associations to properly name the multiviewer crosspoint destinations.
- Specifying Module Configuration Specifying what modules are fitted in which router module slots.

Using Grass Valley Workbench, **Pull** the router's configuration from the router, modify it and **Push** it back to the router. Contact Grass Valley support for help and advice.

# **4.1 Matrix Output Ports**

# **4.1.1 Router Output Ports**

Router output ports for the multiviewer crosspoint module must be set to be of type 'DigitalVideo', covering router matrix port numbers 1153 to 1292.

### 4.1.2 Matrix Destinations

The mapping of destination matrix port numbers to router module slots is given in Table 11.

Table 11 Router Destination Matrix Port Number Mapping for MV-800 module slots

Slot()		Sirius Router Model					
(see Section 3.3 for slot identification)	830	840	850				
Slot (4) (Top slot)	N/A (Slot not available for MV-800 on Sirius 830)	1249 - 1292 ( <b>44</b> inputs *)	N/A (No third upper rear slot on Sirius 850)				
Slot (3)	1201 - 1248 (48 inputs)	1201 - 1248 (48 inputs)	1153 - 1200 ** (48 inputs)				
Slot (2)	1153 - 1200 (48 inputs)	1153 - 1200 (48 inputs)	1225 - 1272 ** (48 inputs)				
	* Only 44 inputs are avai	lable in the top slot					

<sup>\*</sup> Only 44 inputs are available in the top slot.

Note: There are normally 48 inputs for a MV-800 module from the host Sirius 800 router frame.

However, for a third, 'upper-slot' MV-800 module (i.e. top slot in router frame), only **44** inputs are available to the MV-800 Integrated Multiviewer.

This is reflected in Table 11.

<sup>\*\*</sup> Different slot numbering used for Router Destinations of a Sirius 850 frame.

# 4.2 Module Configuration

# 4.2.1 Module Type

See Table 12 for the module types for router configuration.

Table 12 Router Configuration - Module Types

Sirius Router Module Addresses									
<b>Module Number</b>	Module Name	Router Module Type							
5902	Multiviewer Crosspoint	VideoCrosspointVariant2							
5934	MV-800 Main Module	Multiviewer							

Other router module combinations are possible in these slots, for example, 5931 Multiviewer Output modules; contact Grass Valley support for advice.

### 4.2.2 Sirius Router Module Addresses

A Sirius router controller and router configuration refers to module slots with module addresses, given in Table 13.

Table 13 Sirius 800 Module Addresses

	S	irius Route	er Module	Addresse	Comment						
Slot Number (see Section 3.3)	020	940	950	Dua	l 850						
(500 50000000000)	830	840	850	Frame 1	Frame 2						
Slot (4)	-	248	-	-	-	Sirius 840 only. For possible third MV-800.					
Slot (3)	247	247	246 *	246 *	249*	For possible MV-800					
Slot (2)	246	246	247 *	247 *	250 *	For possible MV-800					
Slot (1)	245	245	245	245	248	For 5902 Multiviewer Crosspoint					

<sup>\*</sup> There is a module address number sequence difference for the Sirius 850 router frame.

Corresponding router frame slot locations are found in the Grass Valley 'Workbench User Manual' (see Appendix C, Sirius 800 Routers) and are shown in figures below:

- Figure 24 and Figure 25 for Sirius 830,
- Figure 26 and Figure 27 for Sirius 840,
- Figure 28 and Figure 29 for Sirius 850.

Figure 29 Sirius 850 Module Addresses

# Appendix A MV-800 Specification

# A.1 Physical/Electrical

Power	
1 OWEI	
Power consumption	200W
	MV-800 hardware modules are powered by the hosting Sirius 800 router frame.
	Check with Grass Valley support to ensure that your Sirius router power supply configuration and router module configuration can support the MV-800.
Operating Temperature	5 to 30°C ambient.
	See <b>Note 1</b> .
Weight:	
Front Module	3.5 kg
Rear Panel	0.75 kg
Note 1:	The MV-800 Integrated Multiviewer operating temperature range is lower than that of a Sirius 800 host router.
	Refer to the Sirius 800 User Manual for the router frame operating temperature range.

# A.2 Inputs

Signal	
Inputs	48 off internal inputs from router.  Selectable from all router inputs. (For router destination number mapping, see Table 11 on page 42.)
	<b>Note:</b> There are only 44 inputs available to an MV-800 fitted into the upper slot of a Sirius 840 router frame.

# **A.3 Head Display Outputs**

Signal			
Multiviewer Head Display	From 4-off up to 12-off outputs:		
Outputs	Outputs 1 to 4 on standard MV-800.		
	Outputs 5 to 12 requires licenses.		
	SDI HD-BNC or fiber via SFP.		
	Video standard:		
	• 3G 1080p (50, 59.94 and 60 frames/s).		
	<ul> <li>HD 720p (50, 59.94 and 60 frames/s).</li> </ul>		
	<ul> <li>Locked to the multiviewer's selected timing reference.</li> </ul>		
SFPs	Optional SFPs:		
	Dual coax SFP.		
	Dual Fiber SFP.		
	Single HDMI SFPs. (Up to 6 x HDMI outputs, 1080p).		
Display Output Delay	Progressive input: 1 input frame + 1 to 3 output frames.		
	Interlaced input: 1 input fields + 1 to 3 output frames.		

# A.4 Input Video Standards

Input Video Standard				
3G-SDI:	1080p	59.94Hz	SMPTE 424M/Level A	
2.97Gbps	1080p	60Hz	SMPTE 424M/Level A	
	1080p	50Hz	SMPTE 424M/Level A	
HD-SDI: 1.485 Gbps	1080i	60Hz	(ANSI/SMPTE-274M(4) 292M(D))	
1.403 dbps	1080i	59.94Hz	(ANSI/SMPTE-274M(5) 292M(E))	
	1080i	50Hz	(ANSI/SMPTE-274M(6),-292M(F))	
	1035i	60Hz	(ANSI/SMPTE-260M-292M(A))	
	1035i	59.94Hz	(ANSI/SMPTE-260M,-292M(B))	
	1080p	30Hz sF	(ANSI/SMPTE-274M(12) as per RP211)	
	1080p	29.97Hz sF	(ANSI/SMPTE-274M(13) as per RP211)	
	1080p	25Hz sF	(ANSI/SMPTE-274M(14) as per RP211)	
	1080p	24Hz sF	(ANSI/SMPTE-274M(15) as per RP211)	
	1080p	23.976Hz sF	(ANSI/SMPTE-274M(16) as per RP211)	
	1080p	30Hz	(ANSI/SMPTE-274M(7)-292M(G))	
	1080p	29.97Hz	(ANSI/SMPTE-274M(8)-292M(H))	
	1080p	25Hz	(ANSI/SMPTE-274M(9)-292M(I))	
	1080p	24Hz	(ANSI/SMPTE-274M(10)-292M(J))	
	1080p	23.976Hz	(ANSI/SMPTE-274M(11)-292M(K))	
	720p	60Hz	(ANSI/SMPTE-296M(1)-292M(L))	
	720p	59.94Hz	(ANSI/SMPTE-296M(2)-292M(M))	
	720p	50Hz	(ANSI/SMPTE-296M(2)-292M(M))	
SD Video Standards	525	60Hz/ 59.94Hz 4:3/16:9	(ITU-R BT.601-5, ANSI/SMPTE-259M(2)	
	625	50Hz 4:3/16:9	(ITU-R BT.601-5, ANSI/SMPTE-259M(2)	

# A.5 IP Outputs

Signal			
IP stream outputs	Up to 48-off streamed outputs. Streaming out of H.264-encoded Multiviewer Video Inputs.		
	Each multiviewer input can be H.264 encoded to create streamed, scaled copies of the 48 inputs. These are streamed out over IP.		
	These can be viewed on desktop PCs via Orbit with the MV-800-DT option. Applications include: confidence monitoring compliance monitoring.		
	<b>Note:</b> The H.264 streams do not function for the following slower-frame-rate HD standards:		
	<ul> <li>1080p30 (and slower frame rates); and</li> </ul>		
	<ul> <li>720p30 (and slower frame rates).</li> </ul>		

# A.6 MV-800-RP Rear Panel Connectors

The MV-800-RP Rear Panel module number is 1312. See Figure 6 on page 15 for an illustration of the Rear Panel connectors.

Connectors			
Multiviewer Display Outputs 1 to 12	6-off SFP cages. Each for an SFP video module:		
	2-off SDI Coax, HD-BNC.		
	or 2-off SDI Fiber.		
	• or 1-off HDMI.		
НОМІ	Not currently used.		
USB	Not currently used.		
LTC & GPIO	1 x 26 Way High Density D-Type female connector, see Section 2.2 MV-800-RP Multiviewer Rear Panel (1312) for wiring details and pinout.		
1G Ethernet	2 x 1 Gbps SFP+ cages for Ethernet SFPs. Ethernet socket RJ45.		
10G Ethernet	2 x 10 Gbps SFP+ cages for Ethernet SFPs. Ethernet socket RJ45. Interfaces are not used.
