

6) Default Video Wall (Display Outputs 1 to 4)

A default video tile-grid is shown on head **Display Outputs 1 to 4**. All 48 video signals monitored by the multiviewer are shown. And 'HH:MM:SS' time and 'display output number' are also shown.

1	2	3	HH:MM:SS OUTPUT 1	13	14	15	HH:MM:SS OUTPUT 2	25	26	27	HH:MM:SS OUTPUT 3	37	38	39	HH:MM:SS OUTPUT 4
4	5	6		16	17	18		28	29	30		40	41	42	
7		8		19		20		31		32		43		44	
9	10	11	12	21	22	23	24	33	34	35	36	45	46	47	48

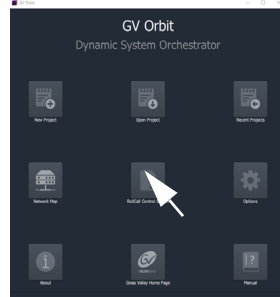

Figure 5 Default Video Wall Layout (Default monitoring: 1 to 24 router outputs; 25 to 48, router inputs.)

7) Edit Video Wall Layout and Configure Alarms

See the [Grass Valley web site](#) for GV Orbit and MV-831 user manuals. Perform the following steps to check basic functionality for the video wall, setting an alarm, and GV Orbit network connection:

View MV-831 Settings:

1. Run GV Orbit Client (v4.0 or later) on a PC.
2. Click **RollCall Control Screen** and enter the new MV-831's IP address. Click **OK**. The MV-831 RollCall control screens are opened in a tab.
3. On the **System - Setup** screen, take a note of the MV-831's 1G1 Interface **IP address** and RollCall Settings **Domain ID**.
4. Close the tab.

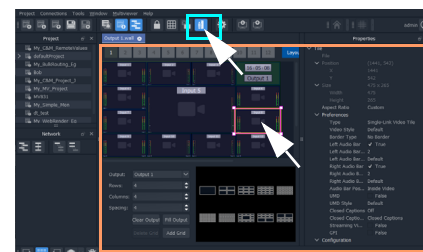

Pull Default Layout from New MV-831:

5. Click **New Project** and select "**Connected Multiviewer Project**".
6. Browse into a new and empty PC folder, where project data will be stored. Click **Choose**. Click **Next**. A list of devices available to GV Orbit is shown.
7. Select the MV-831 from the displayed list. Click **OK**. A login screen is shown.
8. Enter username and password of the project (default = admin, admin). Click **Login**. The project data is pulled from the device and a **Project Home** screen is shown.

GV Orbit Project Screen:

9. Click the **Walls** icon and select a wall item in the drop-down list (e.g. **Wall1**). The wall is shown in **Run** mode.
10. Click the **Design** icon to enter **Design** mode. The icon turns blue and the **Wall Editor** screen is shown.

Make a Visible Change to the Wall:

11. Click on a video wall tile, to select it. **Tile Properties** are shown on the right-hand side.
12. Change property **Preferences > Type** to **Analogue Clock**. The selected tile changes to a round clock face.
13. Click **Project > Save File** in the main menu to save this change.

Enable 'Video Input Lost' Alarm:

14. Click **Multiviewer > Input Alarms** in the main menu. A dialog is shown with tabs. On the:
 - **Input Tab** - Set **Selected Input** to **Input 1**.
 - **Alarm Tab** - Scroll down **Select Alarm** box and select **Video Input Lost**. Select **Alarm Enable**.
 - **Input Tab** - Click **Copy All**.
15. Click **OK**. Click **Project > Save File**.

Video Input Lost alarm is enabled on all MV-831's 48-input multiviewer inputs.

Push Modified Project to the MV-831:

16. Click **Project > Push**.
17. Ensure the project name is selected and click **OK**.

The MV-831 adopts new wall layout: An analogue clock is shown.

Provoking a 'Video Input Lost' Alarm Warning:

18. Disconnect signal going to 48-input multiviewer Input 25. i.e. at the MV-831's **Router Video Input 1** connector. Video loss is detected at the 48-input multiviewer input. A slow-flashing, **red rectangular border** appears around the corresponding video wall tile (tile 25).

Alarms may also be seen in the **Network** window and **Alarm List** window:

19. Locate and expand the **Network** window's MV-831 item.
20. Right-click on the **red Input 25** item and select **Alarm List** in drop-down menu. An **Alarm List** summary window shows the 48-input multiviewer's **Input 25** status.

MV-831

Integrated Multiviewer

Quick Setup Guide

Thank you for purchasing a new **MV-831 Integrated Multiviewer** module. This Quick Setup Guide will help you get the module running as quickly as possible.

An MV-831 module combines a router video input and output module with a 48-input multiviewer. One or more MV-831 modules fit into a Sirius 830 router, each replacing a Sirius 830 input module and adjacent output module.

Upon Receipt of your MV-831 Multiviewer:

The product is supplied in dedicated packaging provided by Grass Valley:

- Do not accept it if delivered in inferior or unauthorized materials.
- Unpack the MV-831 product carefully and check components against the packing list. If anything is incorrect, please notify your Grass Valley Partner or notify Grass Valley directly. (<https://www.grassvalley.com/contact/support/>).
- Check all component items have not been damaged in transit, including the MV-831 front and rear modules. If any damage has occurred, notify your Grass Valley Partner (or Grass Valley directly) and the carrier immediately. Have your order details ready.
- Retain the original packing materials because they could be useful for future transporting or shipping.

The MV-831 User Manual can be downloaded from <https://www.grassvalley.com/products/mv-831/>

Safety Information:

Caution: MV-831 Multiviewer products should only be serviced by qualified service personnel.

Caution: Take anti-static precautions when handling MV-831 modules, or when inserting or removing the modules.

Warning: To reduce the risk of electric shock, do not expose this equipment to water or moisture.

Warning: The MV-831 can be equipped with optical outputs which contain low-power laser beams. Do not look into an optical output. Laser radiation can cause irreversible and permanent damage of eyesight.

Warning: Do not look at the end of an optical fiber to see if light is coming out. Use optical instrumentation.

Warning: Unused optical outputs should be covered, to prevent direct exposure to the laser beam.

1) Fitting an MV-831 into a Sirius 830 Router

Router Power Supplies: Sirius 830 routers have powerful power supplies. In most cases, these are sufficient for powering MV-831(s). Grass Valley recommends checking your router power supply configuration with Grass Valley support before fitting MV-831(s) into the router. (For contact details, see <https://www.grassvalley.com/contact/support/>)

MV-831: This is a double-width Sirius 830 module, comprising double-width Rear & Front modules. See **Figure 1**.

Figure 1 MV-831 Multiviewer Double-width Front and Rear Modules

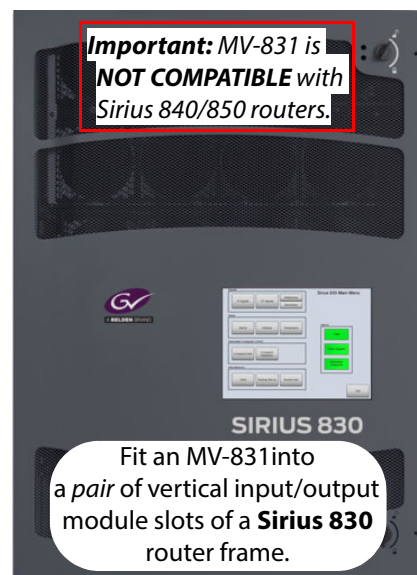

Figure 2 Sirius 830 Router

Fitting instructions:

1. If SFP modules are supplied separately, fit them to the MV-830-RP rear module.

An MV-831 module occupies a pair of (front and rear) router input/output slots. For example: slot-pairs 1 & 2; or 11 & 12.

Note: Router I/O slot numbering: From the **front**, numbering is **left-to-right**; from the **rear**, numbering is **right-to-left**:

• From front of router, L-R:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
Input-Output slot:	1	1	2	2	3	3	4	4	5	5	6	6	7	7	8	8	9	9	10	10	11	11	12	12
• From rear of router, R-L:	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
Output-Input slot:	12	12	11	11	10	10	9	9	8	8	7	7	6	6	5	5	4	4	3	3	2	2	1	1

2. Ensure a vertical 'slot-pair' of router input/output module slots are available and empty.

Go to the **rear** of the router:

3. Remove any blanking plate already covering the router rear slots.
4. Fit the MV-830-RP rear module. Secure with four screws.

Go to the **front** of the router:

5. Open the router front outer door; open the lower router fan door.
6. Insert the MV-831-MB front module. Push the module into the slots with the module ejector handles. Ensure the module is pushed fully into the slots with module ejector handles pushed fully inwards.
7. Close the router's fan door and front outer door.

Caution: Always keep router doors closed to ensure correct unit ventilation and operation. Only open a router door for a maximum of 2 minutes.

Booting: After the front module is fitted, the MV-831 begins to boot up. Booting up lasts for approximately 1 to 2 minutes. During boot-up:

8. A splash screen appears on each active multiviewer head display output. Connect a monitor to each. See **Figure 3**. IP addresses are shown.
9. After booting, each multiviewer head display output shows a default video wall. See **Figure 5** on page 3.

Operating Environment	5°C to 30 °C ambient. 10 to 90% (non-condensing)
MV-831 Weight	MV-831-MB: 3.5 kg (~7.7lb). MV-830-RP: 1 kg (~2.2lb).
Power Consumption	250 W

Table 1 MV-831 Specification

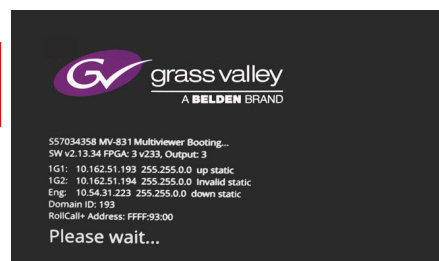

Figure 3 MV-831 Splash Screen

2) Rear Connections

Connect the following:

1. Router **Video Inputs** to video signal sources.
2. Router **Video Output** signals to equipment inputs.
3. **Head Display Outputs 1 to 4** to monitor displays.
4. Network cable to **Ethernet port 1, Control 1**.

Figure 4 Rear Panel

3) MV-831-MB Front Module Indicators

LEDs along the MV-831-MB module's front edge are:

LED	Status	
	OK	Fault
ACT	Flash	-
ERR	Off	On, error
WRN	Off	On, warning
OK	On	Flash, comms fault
LOCAL CMD OK	Flash, On or Off	-
LOCAL CMD ERR	Off	Flash, message error
REMOTE CMD OK	Flash, On or Off	-
REMOTE CMD ERR	Off	Flash, message error

4) Network Configuration

1. Start Grass Valley **RollCall Control Panel** (v4.17.1 or later) on a laptop PC. Click the **Build Network** icon.
2. Enter the MV-831 Ethernet port 1 (1G1) default IP address, 10.54.31.221. RollCall Control Panel connects to the MV-831 and the **MV-831's RollCall Control Screen** is shown.
3. Navigate to the **System-Setup** screen.
4. Set up **Network Settings** relevant to your house network (IP address, Subnet mask, etc).
5. In **RollCall Settings**, set up **Unit** number (default = 01) and **Domain ID** (default = 100) for the MV-831.

Note: Unit number must be unique for each unit. Typically, 'Domain ID' is the same for each unit.

Restart MV-831:

6. In the **System-Setup** screen; click **System Reset**; then click **Confirm**. The MV-831 boots up and a splash screen shows the unit's IP address and other details (see **Figure 3**).
- After MV-831 has restarted, initial network configuration is complete.
7. Disconnect MV-831 Ethernet port 1 from laptop PC. And connect the port to the house network.

5) Router Configuration

Both of the Sirius 830 router slots used by an MV-831 must be set up in the router's configuration. See items shown in **Table 2**.

Multiviewer Monitoring Mode:

By default, all MV-831 router o/p/s and i/p/s are monitored by the MV-831's 48-input multiviewer (1 to 48 = O/p/s 1 to 24 and I/p/s 1 to 24 respectively). (Monitoring mode is set with router slot configuration items **Redundant Crosspoint Enable** and **Main Output Follow**, both enabled by default.

Module Type - Input slot	MV830Input
Module Type - Output slot	MV830Output
Input and Output Ports	MV830
Logical Sources	VideoSource
Logical Destinations	VideoDest
Router Frame Number	14
EmbeddedTimecodeEnable	True
