# Rio

## High-performance Online Editing, Color and Finishing for HD, 4K UHD, 4K DCI and 8K UHD

# RIO

## High-performance Online Editing, Color and Finishing for HD, 4K UHD, 4K DCI and 8K UHD

Rio delivers stunning images at any and every resolution, color space and framerate — whatever today's rapidly changing industry throws at it. Rio has the power to handle the whole job interactively through its comprehensive online editing, color correction and finishing toolset.

Whatever the job, Rio blends quality and creativity in a package that delivers the productivity needed to succeed in movie and TV finishing, getting the whole job done efficiently and without creative limits.

### Performance

Rio delivers the ultimate productive post workflow. Thanks to its real-time performance, its complete, integrated toolset that keeps the whole job in the suite, and full integration into today's file-based workflows, Rio can handle everything you require from a finishing system — interactively and in real time, making it the natural choice for client-attended sessions.

To achieve this performance, Rio runs on enterprise PC hardware that exploits the latest NVIDIA Maximus multiGPU technology to deliver interactive, real-time performance, even at 8K 60p.

### Quality

With native colorspaces stored on disk, Rio handles Wide Color Gamut (WCG) and High Dynamic Range (HDR) grading utilizing a range of transfer curves. Its 32-bit full-float processing provides the best quality results with the highest precision color reproduction output in a range of colorspaces, including REC 2020, ACES, DCI-P3 and REC 709.

### Choice

Rio is available in a choice of two turnkey configurations:

- Rio 4K — unmatched power and capability for high-end TV (UHD) and movie finishing (DCI)

- Rio 8K — the world's only real-time 8K 60p color and finishing system

For those preferring to build their own hardware platform, there is a software-only option:

- Rio 4K software — all the tools for 4K color and finishing for UHD and DCI

### Open

Rio supports a wide range of data formats alongside wide color gamut and HDR. These include: OpenEXR, RED HDRx, Apple ProRes 422, Sony F55/65, Arri RAW, Canon, Phantom, Silicon Image, Blackmagic Cinema DNG, Sony XAVC and GoPro.

### Powerful Primaries

Rio's wide range of primary color correction tools gives colorists the freedom to work the way they like. Primary tools include control of hue, saturation, lift, gamma and gain, with master and individual channel controls. Rio's S-curve pivot point function gives precision control over the critical toe and shoulder ends of the gray scale, enabling the colorist to give definition to shadow areas while rolling off the brighter areas to give a classic filmic look. RGB and Density Printer Light controls are complemented by editable curves working in RGB, YUV or HSL for complete color control — all this in any color space.

- With HDR and wide color gamut features, updated interface, enhanced Avid integration and super accurate cloud tracker, Rio provides the complete color and finishing system
- Rio delivers the ultimate productive post workflow
- The Neo panel provides natural heads-up control of color and seamless interaction with Rio's comprehensive grade management facilities
- Rio has real-time performance, a complete color and finishing toolset and full integration into today's file-based workflows

- Rio delivers stunning images at any and every resolution color space and framerate
- Rio offers a range of systems that takes advantage of the latest PC hardware to provide new levels of interactivity and openness
- Rio systems match the formats you work in today, as well as advanced formats for tomorrow
- Secondary controls include unlimited cascaded secondary color correction
- Dolby Vision support for Rio 4K

- New Grass Valley lossless compression codec — choose to run Rio uncompressed or compressed from 2:1 to 6:1 compression
- OpenFX support for third-party video and temporal filters
- Support for latest cinema cameras from ARRI, RED, Sony, Canon and more

Color UI featuring custom curves and storyboard

The Neo panel is individually configurable for multiple users

# Rio has all the tools you need to create with color. There are no limits with Rio: wide color gamut, HDR, multiple transfer curves are all supported. 32-bit float processing provides ultimate color precision. Primary color corrections can be combined with unlimited cascaded secondaries and unlimited shapes, all in context across the multilayer timeline. Everything remains live for further enhancement.

## Unlimited Secondaries

Secondary controls include unlimited cascaded secondary color correction, HSL vector selective with control of high and low softness for hue, saturation and luminance, giving high-precision results. The Revolver HSL-based secondary color corrector adds multiple simultaneous "in-picture" modifications.

There are graphic one-shot and freehand tools for selection and isolation of secondaries within the image, with controls to grow, shrink or blur the selected area. Different keys can be applied on every cascade using the auxiliary clip function.

Blend modes can be used between cascades to create more subtle looks; this also provides an opacity control between cascades. Rio's range control is a very powerful addition to the toolset that gives absolute precision and subtlety in selective color control. It allows the low, mid and high ranges for the individual color controls to be precisely defined. Using the range graphs, it's possible to adjust exactly how each control will affect the image, including the tensioning and slope for each curve. Range-based saturation controls provide even more precision. Everything is easily accessed from the Neo panels. The range controls complement Rio's Dmin/Dmax controls.

## Shapes

Using Rio's shapes and HSL keyer in combination, the colorist can define highly selective treatments of specific areas within the frame — and can grade both inside and outside the shape within a single cascade. The colorist can choose from preset graphical shapes or hand draw them for ultimate accuracy. Full softness control is available inside and outside the shape using Rio's Matinee tool. Any plugin can be applied to any cascade and used inside or outside any shape or key. Rio's versatile point tracker or the integrated Mocha tracker and flexible shapes tools makes color correcting moving-image elements simple and quick.

## ACES Support

Rio supports The Academy Color Encoding Specification (ACES) and fully integrates into ACES pipelines, delivering a standard, future-proof color space.

## Dolby Vision Support

Rio 4K incorporates support for Dolby Vision™ using a Dolby CMU box. This allows for multiple HDR/ SDR deliverables within a single package, analysis choices and trim functions mapped to the Neo panel.

---

Rio's comprehensive editing and finishing toolset has everything you need to deliver the entire job, whether working with native colorspace on disk, grading in HDR or outputting multiple versions in mixed colorspaces — all from the same timeline.

Rio is your complete digital partner, handling RED, ARRI, SI, Sony, Panasonic, Blackmagic and Canon digital media in a highly efficient workflow while maintaining ultimate image quality at 4K and beyond.

## Production Compression Codec

Choose to run Rio 4K and Rio 8K uncompressed or anything from 2:1 to 6:1 compression. Once compressed onto disk, the codec is lossless across multiple renders. This means you can get more media onto your existing storage at the same ratios as the compression chosen.
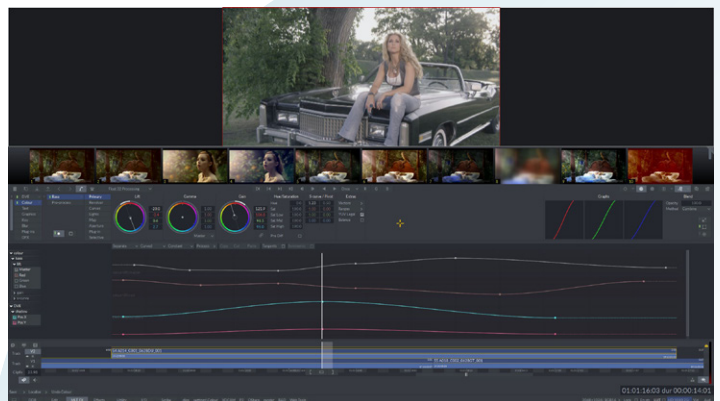

This is a brand new production compression codec from Grass Valley. It was originally based on VC2/Dirac with significant additional technology added by Grass Valley engineering.
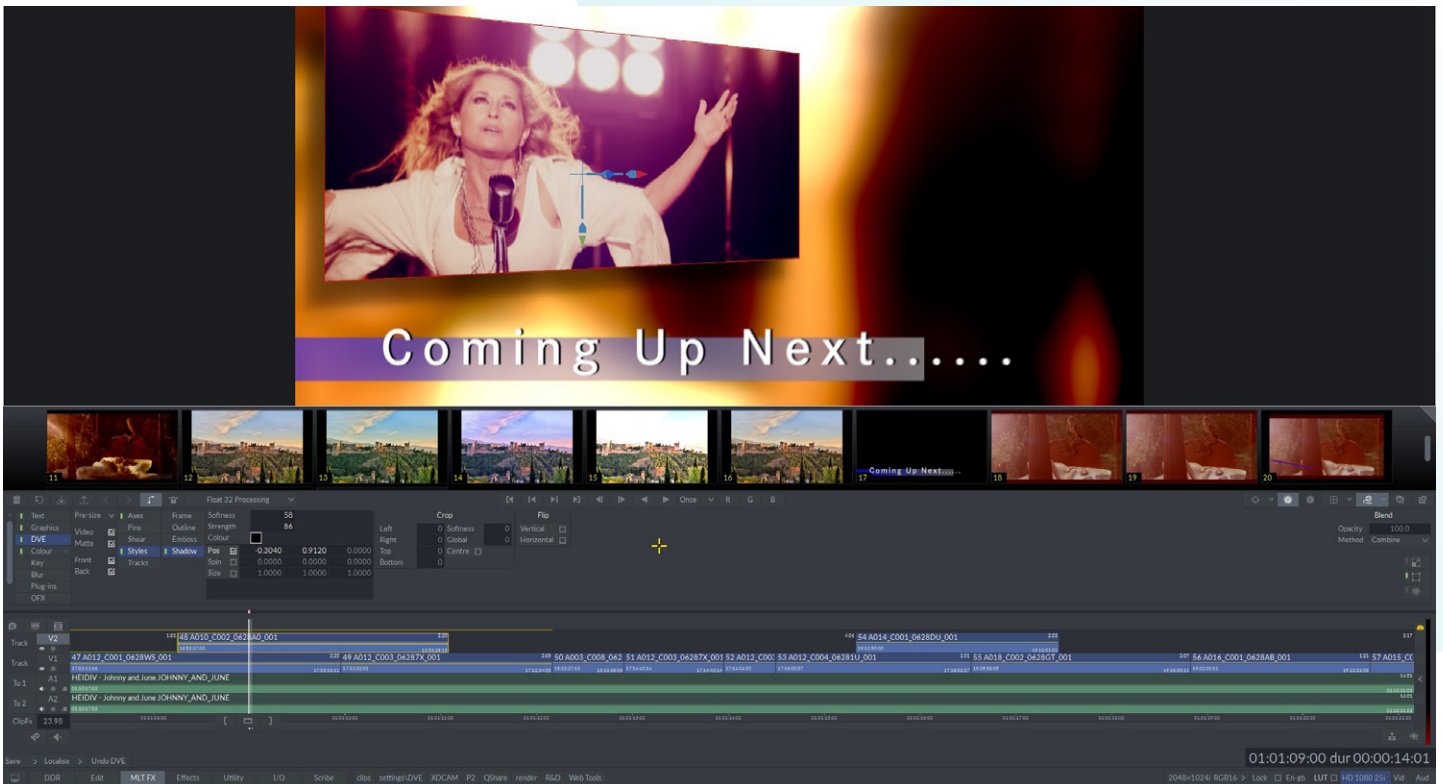

## Groups and Storyboards

Rio's Groups function is a great timesaver; it allows a grade to be automatically applied across a group of shots selected within a timeline. This includes grouping based on rush ID (multiple shots that have come from the same source rush), source timecode or a manual selection, allowing color settings to be applied on an individual cascade basis. The result is faster client-attended operation with even more flexibility. The Storyboard facility allows a grade from any shot to be instantly applied to any other — not just within one job, but across multiple projects. For example, Episodes 2 and 3 of a TV series can quickly be referenced against the first episode to provide consistency of look — all at the lightning-fast speeds you'd expect from Grass Valley.

## Stereo3D Color Correction

Rio's autobalance tool fixes the inevitable left/right eye differences from the shoot prior to color correction. The Rio Stereo3D tools then enable each eye to be color corrected independently or together. Rio also includes full disparity control of shapes, making it easy to color correct in stereo.

Rio includes comprehensive key-framing facilities

The Rio toolset delivers much more than color correction

## Aperture Correction
Rio's aperture correction tool enables variable sharpening and defocusing on a per-cascade basis with just a single control. Aperture correction can also be applied to separate RGB channels.

## Integrated Plug-ins
Plug-ins can be integrated into the color process, and be used within shapes and keys on a per-cascade basis — for example, to produce a specialized defocus or filters inside or outside a shape.

## Choice of Panel
There is a choice of two control panels — Neo and its compact counterpart, Neo Nano. Both provide natural heads-up control of color and seamless interaction with Rio's comprehensive grade management facilities. Both are a great way to access the power of Rio.

Rio also offers third-party panel support for Tangents Elements, Ripple and an iPad app.

## Simple to use Timeline Editor
Whether dropping in late-arriving effects shots, trying a different-length dissolve or putting together a complete promo or trailer, Rio has all the 2D and Stereo3D editing tools to make editorial changes easy.

## Stereo3D Fixing and Finishing
Geofix2 performs precision geometry correction, quickly producing easy-to-watch Stereo3D. Interactive depth balancing makes handing-off over-edits straight forward. Deliverables for different-sized screens are easily produced using the floating-window tools.

## Stereo3D Multilayer Timeline
Rio's Stereo3D multilayer timeline makes editorial and effects work in Stereo3D every bit as fast as working in 2D.

## Integrated Mocha Tracker
The versatile Mocha planar tracker is fully integrated into the Rio toolset, alongside Grass Valley's own point-based tracker. Using Mocha, the artist simply draws a shape around the area to be tracked and Mocha does the rest.

The Neo and Neo Nano panels provide the ultimate in color-correction control. Their simple and uncluttered layouts give fast access to Rio's comprehensive grading toolset. The all-in-one design looks great in your grading suite, with the OLED displays and EL-illuminated buttons allowing you to find all your functions and presets, settings and controls at a glance.

Both the Neo and Neo Nano are fully customizable, right down to the brightness of the displays and the sensitivity of the controls. The Neo panel can even be configured for left- or right-handed use by swapping over the secondary and transport control panels.

### Conform

Rio gives you all the tools you need for video and file conforms including Avid effects. Conforms can be accomplished from either AAFs or EDLs and with both video and file-based media — MXF, DNxHD, RED, DPX, Cineon, Tiff, ARRI RAW, QuickTime and many others are supported.

The conform menu includes powerful tools for applying settings from existing clips to new media such as VFX shots, making it quick and easy to handle late changes.

### Effects and Compositing

Rio's integrated effects and compositing tools give the finishing artist an amazing array of choices for fixes — and the client more creative options — even at the final stages of a project. Never has it been easier to remove distracting items from a shot, replace a sky or even re-frame a whole sequence — right there in front of the client.

### Titling

Rio's on-board tools make it easy to add titles — whether lower-thirds in documentaries or complete subtitles for foreign language versions. Just another feature in the Rio armory that smooths workflow and gives clients more of what they need.

The Neo panel — the ultimate control surface for colorists

The Neo Nano Panel — Smaller footprint with12 full-color OLED displays, and the same electroluminescent buttons, Neo Nano offers identical core primary and secondary grading options, user-definable presets and interactive visual feedback to the full-sized Neo Panel in a much more compact size.

**USB port** for user customizable profiles for all control settings and sensitivity.

**Grade management** for still store and storyboard, with grade grouping and trim management.
**Transport controls** with still store, reference frame control, plus left and right glide pads — eliminating the need for a mouse.

**Primary grading area** with high-mass track balls and built-in digitizing tablet for drawing complex shapes, retouching, etc.

**Secondary grading area** access to all the secondary correction and isolation tools, DVE, and banks of preset effects. Full keyboard speeds text entry for grade management.

**40 full-color OLEDs** associated with controls — interactive visual feedback on current selections.

**Electroluminescent displays** backlit legend makes controls easy to find in a darkened suite.

### Audio

Rio brings up to 32-channel audio with sophisticated tools right into the color correction suite. With Rio, clients can review their movie at full resolution in real time — not only with instant nonlinear access to any shot or sequence, but also with 5.1 audio to complete the experience.

### Respeeds

Comprehensive retiming tools, from optical flow motion through to using the world-renowned Grass Valley Alchemist technology for the ultimate in smooth motion respeed algorithms.

### Retouch

Being a Grass Valley system, Rio has the legendary Paintbox built in. Paintbox is nothing short of brilliant for quick fixes — repairs, replacements, retouches, embellishments. All are completed seamlessly in seconds. Paintbox has rescued more shots than can be easily imagined — it is a huge time, money and face saver. Quite simply, nothing else comes close.

### Versioning

Rio excels at producing the multitude of different deliverables that every movie now requires from the master — SD and HD for playout, airline versions, director's cut, different editorial versions for international distribution and the "making of" for the Blu-ray disc. Re-sizing, reframing, 3D LUTs and pan-and-scan are all handled on-the-fly in real time on output. More convenient for the client; more revenue for the Rio owner.

### Integrated DCP toolset

Grass Valley has integrated the widely-used Fraunhofer DCP API into the Rio toolset. This enables the creation of standards-compliant DCP encrypted masters for delivery, and the importing of DCP files into the Rio environment, facilitating their use as a high quality interchange format. Working with the Fraunhofer DCP toolset within the Rio environment saves time and costs associated with exporting media to external systems. Better still, creative work can continue uninterrupted on Rio while DCP packages are being created as a background task.

## Rio's blistering performance is underpinned by the latest computer hardware.

Rio turnkey systems provide guaranteed out-of-the-box performance running on cutting-edge PC hardware. They are available in a wide range of configurations to allow customers to tailor the system to their specific needs. Rio Turnkey systems are supplied fully assembled, configured and tested to provide the ultimate in performance and are supported by Grass Valley 24/7 worldwide.

### NVIDIA Maximus

Rio takes advantage of NVIDIA Maximus technology. NVIDIA Maximus enables multiple GPUs to work together in the same system. Rio uses Tesla GPUs with 5120 CUDA cores capable of delivering 14 teraFLOPS. This power is simultaneously applied to processing-intensive color and finishing operations in Rio, handling most tasks in real time. The result is blistering performance that brings a new level of interactivity to the color and finishing suite.

The Rio 4K and Rio 8K turnkey system utilize the following GPUs:

- Rio 4K provides support for up to 1 or 2 Tesla V100 GPUs

- Rio 8K supports 3 NVIDIA Tesla V100 for image processing and 1 NVIDIA Quadro P620 card for UI display

# With its complete color and finishing toolset and blistering performance, Rio is the natural choice to sit at the heart of your data-centric post pipeline.

## Soft Mount

With soft mount support for RED, OpenEXR, DNxHD, MXF, SStP, F55/65, XAVC, Arri RAW, Canon RAW, GoProMP4, Blackmagic Cinema DNG, Apple ProRes 422, DPX, Cineon, Tiff, P2, XDCAM and RED Epic, there is no need to import media into local workspace with Rio. Work can start immediately wherever the material is stored, whether on a USB drive, SAN or NAS. Rio Archives can also be soft mounted.

## Render on Export

There's no requirement to render media to local storage with Rio. When the job is complete, it is simply rendered as it is exported to the facility SAN or NAS, saving time and disk space.
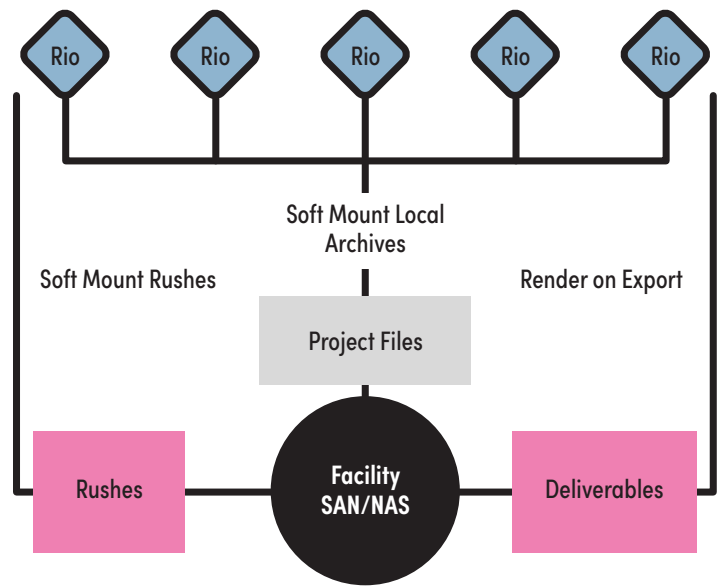

## Teamworking with Rio

Teamworking with Rio is easy thanks to soft mount. With source media stored on the facility storage, all Rio systems can see the same source files. Project files (local archives) can be quickly saved and soft mounted by other systems. These archives point at the source rushes so jobs can be quickly accessed and shared between suites.

## Rio Connect — better workflows; more productive post

The Rio Connect collaborative workflow engine instantly solves facility scheduling challenges by enabling media sharing between up to eight Rio systems. With Rio Connect, time consuming media transfers and copying are eliminated at a stroke.

Every Rio suite can work on the same job, or projects can be instantly moved between suites; Rio Connect enables you to maximize your productivity and revenues.

- Complete flexibility to move jobs at a moment's notice — take on short-notice work

- Teamwork across multiple suites instantly — take on jobs with tight deadlines

- Handle late changes with ease — happy clients return time and again

- Instantly review the state of a distributed project — stay in control

## Rio Software

Rio as a software-only solution is available as a low-cost assistant tool for preparation, conform and pre-vis for file-based editorial, online finishing and color correction. Rio software has a powerful toolset that handles all your backroom jobs quickly and efficiently, enabling your customer-attended Rio sessions to be even more productive.

Rio software is CUDA-enabled, maximizing the performance of your chosen hardware platform. It supports up to 2K (including all HD resolutions) video output and naturally includes rich metadata compatibility with Rio.
- Advanced color tools and 3D LUT color management — create offline looks fast and efficiently

- Optional Neo Nano control panel — intuitive, interactive working

- File-based conform engine with multilayer timeline editing interface

- High quality debayering and transcoding

- Supports all popular RAW formats — optimized workflows for digital capture systems

*Interstellar, Avatar, The Girl with the Dragon Tattoo, Hugo, Gone Girl, My Week with Marilyn* — just a few of the thousands of movies in which Rio has played a central role. Rio's TV credit list is equally impressive, from *Desperate Romantics* to *Birdsong*.

Along the way, Rio has time and again broken new ground: truly interactive working at high resolution; the world's first viable Stereo3D toolset; embracing file-based capture and workflows; and integrating a complete editing and finishing toolset alongside color correction so that jobs speed through the suite whatever the challenge.

Rio's outstanding success is no accident. It was designed with the help of top colorists, and their vision realized with unique technologies and thinking. The result is the most powerful, capable and precise color correction and finishing environment on the planet.

With Rio, client-attended sessions have become an interactive, creative experience, while the integrated finishing toolset gets the whole job done more quickly and more efficiently.

## Rio 4K Turnkey System Specifications

**Supermicro Superserver 7049GP-TRT**

2x Intel Xeon Gold 6136 (with suitable heatsinks):

– 3.00 GHz

– 12 cores / 24 thread

– 25 Mb L3 cache – shared between all cores

– 6 channel memory controller

– Three UPI Links

64 GB RAM:

– 8x 8 Gb 2666 MHz REC ECC DDR4 DIMMs

– (Configured to obtain maximum memory bandwidth)

2x Samsung 240 Gb SSDs (System/Data Drive):

– 240 Gb

– SATA3 (6 Gb/s)

– Configured as a RAID-1 array

2x Samsung 480 Gb SSDs (Audio Drive):

– 480 Gb

– SATA3 (6 Gb/s)

– Configured as a RAID-1 array

1x NVIDIA Tesla V100 16 GB (GPU processor) image processing

1x NVIDIA Quadro P620 (used as display card)

1x DVD-RW Drive – Optairic AD7260S (or equivalent)

5x USB 3.0 ports (x2 front, x2 rear, x1 internal)

4x USB 2.0 ports (x2 internal, x2 rear)

2x RS-422 VTR control (serial interface card supplied uses x1 internal USB 2 port)

Dual redundant 2200W PSUs

Supermicro mobile rack

Keyboard and mouse

Thunderbolt Support (add-on card required, tested – works with the AJA SDI boxes)

Wacom Intuos 5 tablet and pen (as configuration options below)

|  | No Panel | Neo Nano Panel | Neo Panel |
|---|---|---|---|
| Large Tablet | ✔ | X | X |
| Small Tablet | X | ✔ | X |
| No Tablet | X | X | ✔ |

### VTR Serial Interface

2x RS-422 9-pin VTR serial interface ports are provided on the rear of the machine

### Standard Video and Audio Interfaces

4x multiformat 3G/HDSDI/SDI 10-bit outputs/inputs with up to 32 channels of embedded audio

– Inputs auto sense any supported format

32 channel audio is embedded via SDI 1 and SDI 2 (16 channels each)

### AJA Kona 4 Support

The AJA Kona 4 connectors for use in Rio 4K are configured as shown below.

**AJA Kona 4 Supported Output Formats – Mono**

| Mono | FPS | SDI 1 | SDI 2 | SDI 3 | SDI 4 | Output Link Selection (default) |
|---|---|---|---|---|---|---|
| SD YUV 422 (576/486) | 25, 29.97 | | | 1.5G | | Single |
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | | | 1.5G | | Single |
| HD/2K RGB 444 Dual Link | 23.98, 24, 25, 29.97, 30 | | | 1.5G | 1.5G | Dual |
| HD/2K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | | | 3G | | Level B 3G |
| 1080 (P) YUV 422 Level A | 50, 59.94, 60 | | | 3G | | Level A 3G |
| 2K (P) YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | | | 3G | | Level A 3G |
| 720P YUV 422 | 50, 59.94, 60 | | | 1.5G | | Single |
| Quad HD YUV 422 (UHD1) | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G | Single |
| 4K YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G | Single |
| Quad HD RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G | Level B 3G |
| 4K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G | Level B 3G |
| Quad HD YUV 422 (UHD1) Level A | 50, 59.94, 60 | 3G | 3G | 3G | 3G | Level A 3G |
| 4K YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | 3G | 3G | 3G | 3G | Level A 3G |

HDMI Output is also supported and will be active at the same time. Optionally HDMI may downsize QHD and 4K for viewing on an HD monitor (using registry setting "HDMI DownSize QHD to HD").

**AJA Kona 4 Supported Output Formats – Stereo3D**

| 3D Stereo | FPS | SDI 1 | SDI 2 | SDI 3 (L) | SDI 4 | Output Link Selection (default) |
|---|---|---|---|---|---|---|
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | | | 1.5G | 1.5G | Single |
| HD/2K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | | | 3G | 3G | Level B 3G |
| 720P YUV 422 | 50, 59.94, 60 | | | 1.5G | 1.5G | Single |
| 1080 (P) YUV 422 Level A | 50, 59.94, 60 | | | 3G | 3G | Level A 3G |
| 2K (P) YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | | | 3G | 3G | Level A 3G |

*Notes:*

2K = 2048 x 1080, Quad HD = 3840 x 2160, 4K = 4096 x 2160

When selecting the output frame rate in the user interface the appropriate output link choices are provided in the selector menu.

Reference must be the same frame rate as the output in order to lock.

### Storage

As standard, a Rio 4K turnkey system ships with a single external SAS array with 24x Seagate 10,000 rpm 1.8 TB disks configured as dual 10+2 parity disk arrays

Data is striped across both 12-disc arrays for maximum performance (RAID-60)

Delivering 2 GB/s read and 1.7 GB/s write

Up to 6 arrays in total can be added to the system

## AJA Kona 4 Supported Input Formats

| Mono | FPS | SDI 1 | SDI 2 | SDI 3 | SDI 4 |
|---|---|---|---|---|---|
| SD YUV 422 (576/486) | 25, 29.97 | 1.5G | | | |
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | | | |
| HD RGB 444 Dual Link | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | | |
| HD RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | | | |
| 1080P YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | 3G | | | |
| 720P YUV 422 | 50, 59.94, 60 | 1.5G | | | |

## AJA Kona 4 Supported Input Formats – Stereo 3D

| 3D Stereo | FPS | SDI 1 (L) | SDI 2 | SDI 3 | SDI 4 |
|---|---|---|---|---|---|
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | | |
| HD/2K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | 3G | | |
| 720P YUV 422 | 50, 59.94, 60 | 1.5G | 1.5G | | |
| 1080 (P) YUV 422 Level A | 50, 59.94, 60 | 3G | 3G | | |
| 2K (P) YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | 3G | 3G | | |

## AJA Corvid 88 Option (FGAQR 500410) Additional Input Formats Supported

| Mono | FPS | SDI 1 | SDI 2 | SDI 3 | SDI 4 |
|---|---|---|---|---|---|
| Quad HD YUV 422 (UHD1) | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G |
| 4K YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G |
| Quad HD RGB 444 | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G |
| Quad HD YUV 422 (UHD1) | 50, 59.94, 60 | 3G | 3G | 3G | 3G |
| 4K YUV 422 | 50, 59.94, 60 | 3G | 3G | 3G | 3G |

*Notes:*

VPID – Vertical Payload Identifier needs to be present for the AJA Kona 4 to correctly detect the input standard.

## Rio 8K Turnkey System Specifications

**4 RU Mainframe**
**Supermicro Superserver SYS-4029GP-TRT**
CPU: 2x Intel Xeon Gold 6136 (3.0 GHz)
RAM: DDR 4-2666 192 GB
GPU: 3x NVIDIA Tesla V100 for image processing
— 1x NVIDIA Quadro P620 card for UI display
Disks: 2x 240 GB SSD in RAID-1 for system
— 2x 480 GB SSD in RAID-1 for audio storage
— 3x SAS RAID controllers (for video workspace)
4 x rear panel USB3 ports
Dual 10 Gb Ethernet (10G Base-T Copper)
2x RS-422 VTR Control
Quad 2000W PSUs – system will operate with only 2 PSUs
Rackmount kit
Keyboard and mouse

Wacom Intuos 5 tablet and pen (as configuration options below)

| | No Panel | Neo Nano Panel | Neo Panel |
|---|---|---|---|
| Large Tablet | ✔ | X | X |
| Small Tablet | X | ✔ | X |
| No Tablet | X | X | ✔ |

**Video Workspace**

Rio 8K is supplied with 5.5 hours of storage at 7680x4320 10-bit 422 59.94 fps. Essence is stored uncompressed on the system

The storage comprises of three 2 RU arrays each with 24 1.8 TB 10,000 rpm SAS drives

Each array is configured as RAID-60 with 20 drives and 4 parity drives

Each array has dual PSUs

The arrays are connected via SAS to the Rio 8K mainframe

Rio 8K does not support 8K 60p record or playback with a failed disk as the performance of the SAS RAID controllers drops by about 30% with a faulty disk present

No media is lost in the event of a disk failure and the system can continue to be used with one faulty drive although without real-time record or playback. The video data continues to be fully protected in the event that one drive fails per array.

Failed disks should be replaced when the system is not in operation as rebuilding the array further impacts performance and takes up to 6 hours

Expansion of the video workspace is possible by adding option 115 and/or option 117 taking it up a total of 18 arrays (6 wide and 3 deep), providing a total of 33 hrs of 7680x4320 @60p

**Audio Storage**

Audio is stored on a mirrored pair of 480 GB solid state disks in the Rio 8K mainframe

Audio is stored as uncompressed 48 kHz 24-bit per channel

The storage capacity for 32 channel audio is 20 hours

The audio data is stored on two disks in a RAID-1 mirror configuration so is protected in the event of a failure of either disk. However, unlike the video data the audio data is not protected if one of the audio drives has failed. To reduce the risk of losing any audio data the system should not be used with a failed audio drive – the failed drive should be replaced and the array rebuilt as soon as possible. Rebuilding the array takes up to 90 minutes
**Video and Audio Interfaces**

Video and audio input/output is provided by four AJA Corvid 88 cards each with 8 3G SDI interfaces

**8K Input and Output**

The 16 connections used for 8K 60p are allocated as follows:

The individual 3G SDI interfaces map to the 16 HD tiles of the 8K image as shown below:

| Card 1 | Card 2 | Card 3 | Card 4 |

| SDI-1 | SDI-2 | SDI-5 | SDI-6 |
|---|---|---|---|
| SDI-3 | SDI-4 | SDI-7 | SDI-8 |
| SDI-9 | SDI-10 | SDI-13 | SDI-14 |
| SDI-11 | SDI-12 | SDI-15 | SDI-16 |

For 8k 60p operation Level A 3G SDI signals are supported

32 channels of embedded audio are supported on Rio 8K via SDI-1 and SDI-2 which each handle 16 channels of audio

**Other Supported Output Formats – Mono**

When working with output formats other than 8K, the user chooses which Corvid 88 card to use and the tables below describe how the 4 SDI outputs on the selected card are used.

| Mono | FPS | SDI 1 | SDI 2 | SDI 3 | SDI 4 | Output Link Selection (default) |
|---|---|---|---|---|---|---|
| SD YUV 422 (576/486) | 25, 29.97 | 1.5G | | | | Single |
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | | | | Single |
| HD/2K RGB 444 Dual Link | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | | | Dual |
| HD/2K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | | | | Level B 3G |
| 1080 (P) YUV 422 Level A | 50, 59.94, 60 | 3G | | | | Level A 3G |
| 2K (P) YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | 3G | | | | Level A 3G |
| 720P YUV 422 | 50, 59.94, 60 | 1.5G | | | | Single |
| Quad HD YUV 422 (UHD1) | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G | Single |
| 4K YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G | Single |
| Quad HD RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G | Level B 3G |
| 4K RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G | Level B 3G |
| Quad HD YUV 422 (UHD1) Level A | 50, 59.94, 60 | 3G | 3G | 3G | 3G | Level A 3G |
| 4K YUV 422 Level A | 47.95, 48, 50, 59.94, 60 | 3G | 3G | 3G | 3G | Level A 3G |

*Notes:*

2K = 2048x1080, Quad HD = 3840x2160, 4K = 4096x2160

When selecting the output frame rate in the user interface the appropriate output link choices are provided in the selector menu.

Reference must be the same frame rate as the output in order to lock.

32 channels of embedded audio are supported.

**Other Supported Input Formats**

When working with output formats other than 8K, the user chooses which Corvid 88 card to use and the tables below describe how the 4 SDI inputs on the selected card are used.

| Mono | FPS | SDI 1 | SDI 2 | SDI 3 | SDI 4 |
|---|---|---|---|---|---|
| SD YUV 422 (576/486) | 25, 29.97 | 1.5G | | | |
| HD YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | | | |
| HD RGB 444 Dual Link | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | | |
| HD RGB 444 Level B | 23.98, 24, 25, 29.97, 30 | 3G | | | |
| 1080P YUV 422 Level A or B | 50, 59.94, 60 | 3G | | | |
| 720P YUV 422 | 50, 59.94, 60 | 1.5G | | | |
| Quad HD YUV 422 (UHD1) | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G |
| 4K YUV 422 | 23.98, 24, 25, 29.97, 30 | 1.5G | 1.5G | 1.5G | 1.5G |
| Quad HD RGB 444 | 23.98, 24, 25, 29.97, 30 | 3G | 3G | 3G | 3G |
| Quad HD YUV 422 (UHD1) | 50, 59.94, 60 | 3G | 3G | 3G | 3G |
| 4K YUV 422 | 50, 59.94, 60 | 3G | 3G | 3G | 3G |

*Notes:*

Quad HD = 3840x2160, 4K = 4096x2160.

VPID – Vertical Payload Identifier needs to be present for the AJA Corvid 88 to correctly detect the input standard.

3D Stereo input is not supported

32 Channels of embedded audio are supported.

### Minimum requirements when installing a Rio 4K software:

Windows 10 Pro

2x Intel Xeon E5-2660W v3 (2.6 GHz, 25 MB cache, 10 cores, Intel vPro)

Minimum Base Clock Frequency: 2.6 GHz

Minimum Core Count (Per CPU): 8

64 GB RAM

NVIDIA Quadro K620 – used for UI

NVIDIA Tesla Kepler K40 or K80 GPU card – used for image processing to deliver real-time performance

Latest Quadro/Tesla driver version

Fast storage with a high bandwidth connection capable of delivering 2 GB/sec read and 1.7 GB/sec write

240 GB hard drive/SSD – system/data drives

480 GB hard drive/SSD – audio drive

### Minimum Workspace

**Rio 4K:** 1x 36 TB SAS array 12 hrs 3840x2160 @ 25 fps
**Rio 8K:** 3x 36 TB SAS arrays 5.5 hrs 7680x4320 @ 60 fps

### Maximum Workspace

**Rio 4K:** 6x 36 TB SAS arrays 72 hrs 3840x2160 @ 25 fps
**Rio 8K:** 18x 36 TB SAS arrays 33 hrs 7680x4320 @ 60 fps

# Grass Valley — we're here to support you, always.

At Grass Valley, customer support runs through our DNA. When you buy Rio, your investment continues to pay dividends throughout its lifetime. World-class color, editing and finishing technology is combined with the market's leading technical and operational support.

Expert advice, delivered at the right time, helps insure that operational issues don't become problems. At Grass Valley, we make sure that specific information and practical advice is available — whenever, wherever and whatever your need.

### More than just spare parts
Grass Valley's rigorous quality assurance differentiates us from other suppliers. As a result, Rio stands apart from its rivals in terms of robust reliability and operational longevity.

But we don't take anything for granted. Providing further return on your investment, Grass Valley has expert support engineers, available to you 24/7, 365 days a year. When replacement parts are needed, they are dispatched immediately from one of more than 20 warehouse distribution centers worldwide. Our investment ensures speedy resolution of issues that might affect your operations.

### Online support increases access, enhances transparency
Through our online support portal you can monitor and track any support issue and even engage one-to-one with support engineers for fast answers to any questions.

Your request might not be urgent, but it is still important to us. Through our website, you can obtain license keys, product enhancements and the latest software upgrades. Also, you can download manuals and product collateral.

Buying Rio is just the start of your relationship with Grass Valley —one that we value and cherish. Grass Valley customer support is a key initiative, intended to help you and your team whenever you need it. To learn more about Grass Valley Customer Support Services contact your local Grass Valley representative.
