DVI-Ramp2 control software

The software used to control the DVI-Ramp2 is a Java-based application that could theoretically run on any platform supporting Java. But because of the USB link required to communicate with the device, there needs to be some tweaks on each supported platform. For details about those tweaks, please refer to the corresponding sub-folder. Below is a description of the files and folders provided for the software installation.

DVI-Ramp2_Software.zip	Contains the Java application with its release notes. This file is used for both Windows and Linux platforms.
Software_tutorial.pdf	Contains a brief tutorial on the usage of the application.
Windows_specifics	Folder containing instructions and files required for installation on a Windows platform.
Linux_specifics	Folder containing instructions and files required for installation on a Linux platform.

DVI-Ramp2 firmware update

The software used to control the DVI-Ramp2 is also used to update its firmware. Detailed instructions on the update procedure are found in the sub-folders specific to the host platform used (Windows or Linux).
